Quake 1.0 Beta

This is the complete source code for winquake, glquake, quakeworld, and glquakeworld. The code is all licensed under the terms of the GPL. All of the Quake data files remain copyrighted and licensed under the original terms. You can still download one of the original quake demos and use that data with the code.

This is a BeOS binary version of the SDL port of Quake. This is a VERY quick port, IT IS NOT PERFECT. You will also need the Quake shareware levels. Make sure you get the .tar.gz file and NOT the .zip file.
