Microsoft Visual Basic 3.0 For Windows 3.0
http://vetusware.com/download/Microsoft%20Visual%20Basic%203.0%20For%20Windows%203.
0/?id=12701
Microsoft Visual Basic was a programming environment where one could build an application by
visually creating the user interface first, and then adding code. Microsoft Visual Basic 3.0 was the
most popular version for Windows 3.x development. It is the last to create executables that do not
require complex installation, with small runtimes, and minimal memory usage. The professional
version includes Crystal Reports, and a setup generation wizard. Many third party controls were
developed for VB 3. This is also the last version compatible with Windows 3.0. This is the
Standard version. The zip file contains the 9 disk images. Needs to be installed from Windows 3.1
(requires switching disks which did not work at all using DOSBOX emulation - instead need to
create a Windows 3.1 PC using Virtualbox and mount image files there instead as floppy disks).
