HOWARD the FONT 3.61
 http://vetusware.com/download/HOWARD%20the%20FONT%203.61/?id=15128
This package comprises a set of display font managers, font data files, display accelerators, and utility programs. The font managers provide an easy way to access the font capability of the VGA/MCGA and EGA. Each is designed to occupy the absolute minimum amount of space needed to support its target adapter. The HOWARD and NEIL font families have been created with display readability as the primary goal. FONTPAK offers a group of various display fonts which may also prove useful, while NLSFONTS represents the beginning of National Language Support (NLS). The VGAvideo display accelerator provides easily selectable DOS colors and support for any number of display rows while speeding up teletype output. VGAcolor is a windowing utility which allows you to choose colors quickly and easily. EGAvideo is similar to VGAvideo, but includes code to correct errors in the BIOS of the IBM EGA card. EGAcolor allows you to select colors for EGAvideo. EGMvideo and MDAvideo speed up display output in monochrome mode; the former should be used with an EGA and corrects some of that adapter's bugs. Both handle any number of rows. ClrScr will clear the screen correctly regardless of the number of display rows, and MOST is a superior replacement for the DOS MORE filter. WANDA loads the HOWARD8 font on a PC Convertible, while ShowFont may be used to display all the

characters in a font.   The VMODEx utilities provide a faster way to issue video mode sets. IBM Internal Use Only

Microsoft Multiplan 1.10 (IBM OEM)
 http://vetusware.com/download/Microsoft%20Multiplan%201.10%20_IBM%20OEM_/?id=15142
Microsoft Multiplan was an early 8-bit spreadsheet application for CP/M and MS-DOS with ports to numerous other platforms in the early 80s. Initially it competed against VisiCalc and later Lotus 1-2-3. A companion product, Microsoft Chart, provided graphing support. Multiplan was never ported to Windows, where it was replaced with Microsoft Excel. Excel also replaced Multiplan on the Macintosh platform.   This is the second IBM OEM release (The first being 1.00).

IMPORTANT! This software is copy protected, and no unprotect is known to exist.

OsoSoft's Fonter 5.0
 http://vetusware.com/download/OsoSofts%20Fonter%205.0/?id=15144
Windows 3.x lets you use fonts quickly and easily, both on the screen and in your printed documents. Using Windows 3.1's TrueType fonts, or fonts automatically scaled by programs like Adobe Type Manger, Bitstream FaceLift, and others, you can have access to thousands of typefaces, all of which will work in any Windows program.   But there's a problem. It's often difficult to choose just the right font for the job. That's where Fonter comes in. It lets you view any Windows font on the screen, in several ways. Even better, Fonter lets you create printed lists of all your fonts, with a text sample of each font. You can also print sample sheets showing your font in all of its variations, and a character set chart which will help you discover just what characters are in every font.   Requires VBRUN100.DLL

PC-SIG Disk 0855 FASTBUCKS version 3.18

http://vetusware.com/download/PC-SIG%20Disk%200855%20FASTBUCKS%20version%203.18/?id=15145
FASTBUCKS is a home-financing program that is completely menu-driven, and easy to understand and operate. FASTBUCKS automatically creates files and updates them.
