CORELXARA 1.2
 http://vetusware.com/download/CORELXARA%201.2/?id=16193

version of CorelXARA 1.2 when installed on top of version 1.1. This will only work with English versions of CorelXARA 1.1. The upgrade patch does not include the updated help file packaged with version 1.2. It was available as a separate download. Now it is included in same archive, but

advanced features, high speed and accuracy under extremely low system requirements. Although intended for Windows 95/NT, with this patch CorelXARA still runs on Windows 3.1x if you have Win32s installed. It is probably the latest version that still works at 16-bit Windows, although there

options. These new options are especially useful for creating graphics intended for publishing on the World Wide Web (WWW). Also included are some additional functions requested by users.

Shop Pro etc add-on)  • RGB colors can be specified as 0-100% or 0-255 (CMYK, HSV as 0-100%) • new Pixel measurement unit (useful for web design) • new optional default document (e.g. colors identical to Netscape and MS IE) • optimized palettes and bitmap dithering • new "Convert to bitmap" menu option • improvements to GIF import (easier handling of transparency)   • more options for exporting in GIF format (including animated GIFs) • optional on-screen dithering (useful in 256 color screen modes) • changes to the keyboard shortcuts • new "print text as shapes" print option • change to snapping
