Lotus 1-2-3 4.0 for DOS

<http://vetuware.com/download/Lotus%201-2-3%204.0%20for%20DOS/?id=11987>

Release 4 is the final version available for MS/PC DOS. This version requires at least a 286 CPU.

This version adds a somewhat Windows-like user interface, and adds support for 2D/3D spread sheets. Release 4.0 is backwards compatible with earlier 1-2-3 files.

Valdocs 2.00 for Epson QX-10

<http://vetuware.com/download/Valdocs%202.00%20for%20Epson%20QX-10/?id=11988>

Valdocs is an office suite that was bundled with the Epson QX-10 (and later QX-16) Z80 based computer. It was "WYSIWYG" in that it could display different fonts of different sizes in the editor on the screen. It could also embed images in the document, and print the document to a graphics printer. Valdocs 2 included significant speed improvements over the original Valdocs 1 release - which was heavily criticized for its sluggishness. However Valdocs 2 was released before it was ready and was extremely buggy. Valdocs runs under RSI's TPM-III operating system, which is included on the floppy disks. The system is designed to run from dual floppy drives, but may be installed on a Comprex ComFile 10 megabyte external hard drive. This version is specifically for the QX-10. This archive contains five 5.25" DSDD TPM-III formatted floppy disk images in ImageDisk, SCP, and Kryoflux formats. The disks are as follows: 01 - Load-Time 02 - Run-Time 03 - Utilities 04 - Demo and Master Help files 05 - Data and Master Help files

Valdocs Plus for Epson QX-10 (5.25)

http://vetuware.com/download/Valdocs%20Plus%20for%20Epson%20QX-10%20_5.25_/?id=11989

Valdocs is an office suite that was bundled with the Epson QX-10 (and later QX-16) Z80 based computer. It was "WYSIWYG" in that it could display different fonts of different sizes in the editor on the screen. It could also embed images in the document, and print the document to a graphics printer. Valdocs Plus is an upgrade to Valdocs 2.0 created after Rising Star Industries parted ways with Epson. This version is specifically for the QX-10. This archive contains six 5.25" DSDD TPM-III formatted floppy disk images in ImageDisk, SCP, and Kryoflux formats. 01 - Load 02 - Run 1 03 - Run 2 04 - Utilities 05 - Help 06 - Data

VisiCalc IV v2.0

<http://vetuware.com/download/VisiCalc%20IV%20v2.0/?id=11990>

VisiCalc IV adds graphing, sorting, arranging columns, and keysaver macros. It does this by including StretchCalc. StretchCalc was a third party VisiCalc add-on from Multisoft Corp that added this functionality to previous VisiCalc versions. This archive contains one 320K floppy disk image in Copy 2 PC + Snatchit, Transcopy, Kryoflux, and SuperCard Pro format. Important: This software contains copy protection, and no unprotect is known to exist. To recreate a functional disk, you must use one of the included formats to write it. It appears it may skip the copy protection check if it is run from a hard drive.
