After such a long time of frustration, research, and trial-n-error, I completed it!

Magni, a free screen magnifier. Open Source!

Easy to use and nice looking, one of my very best programs (being not too old!?!?!?)

But yeah. Any bugs? Pls tell me.

I have posted a notification about this on my forum:

http://s15.zetaboards.com/Blulris_Software/forum/3237895/

Enjoy! (This is version 1.0.2)

(Quick post from my Windows 7 PC)

I have decided to update Magni! It's been 2 years, since I last updated this program. So, I decided, I'll bring back some memories and improve on it a little bit.

The program was made in Visual Studio 2008, and I currently use VS2005. That should not be an issue however as the designer and program's code itself are decent.

I'll start working on it now, and then make a new post with the attached new Magni!

Jesus Christ!hehe

Bless Jesus Christ then my mom Huong Thi Thuyen Vu

Honours to her and my dad Nguyen Binh Thuy

Congrats to my siss Nguyen Khoa Thuyen & Nguyen Khoa Thi

Selfie Nguyen Khoa Tien

Re: Your magnifying program does not work for myself on Windows XP or Windows 8.1

It says it needs NetFrame or something and asked if I needed to install it. I told it go ahead to do so and it continues to say crashed. Jus sayin'
