So you have heard some people have 8K HDTV right? Well I've develop blocky for 8K HDTV that are smarts!

The C program in this attachment is the template for the algorithm.

Enjoy my "smarts" from the grace of King of Programming because of God, Jesus Christ, and Mary especially my mom Huong Thi Vu and my dad Nguyen Binh Thuy and of course my two sisters Nguyen Khoa Thi and Nguyen Khoa Thuyen.

This is only a little software of mine. It took quite a bit of work. I spent about 8 hours on it from yesterday until about 3am this morning. The time spent on the program is well worth it since it is flexible like my real dad, Nguyen Binh Thuy, taught me to be. It is also easy to change the fonts and it is "nice" just like my real mom, Huong Thi Vu, would have wanted. Most important of all it says "KinG", meaning ONLY GOD IS KING! All the people of the world including myself are just his creations. I am speaking on my part and I give God all the credits for the rest of my life that I only have good now.

Well, I've decided to come out with all my programs lumped into this one section titled "GodJesus" because that's the way it is. Well unless there's something important and a major breakthrough I'm just going to do it in here for fun. You have to be warned that scientist often have breakthroughs that they don't realize they have born a breakthrough. They would jut work and someone finds it useful one that they are fmous for. So it's up to you to follow this thread or not.

Here in this homework of mine I've been trying to develop an automatic way of making a circle to travel the path of a circle. It does work however the colors are off and there might be a glitch of some sort in DOSBox 0.74. Either that or my programming is off. It could really be that my programming is off since I'm relatively new to programming. Although I started at 9 years old I have not really been serious until last year. Just because I have been doing it for 30 years or such time or so doesn't mean that I know anything about programming. In fact if I do know something I would be working for AT&T, IBM, Microsoft, or some company right now. The truth is I studied programming until 1996 officially at Lehigh County Community College then Lafayette College. I dropped out in my first semester following the first two successful A I got in an upper scale College. It is my lost. I lost the priviledge to be a part of the top notch programmer's group. So now I'm a nobody that make mistakes and my colors are off. So I'm sorry I'm not a professional perfect programmer. I'm a disappointment to everyone around me.

I work hard only to find out that God has it covered! All I have to do is give it away to God and let God handle the problem. For instance I worked hard at pointers and do not understand. Then I praise God and lift God up to the highest point possible and God just gives me the answer on a pure GOLD platter#!! The same thing happened today. I lift God all the way to the top and the answer just appears in my mind!!!!!!!!!! I was working on this problem I had and I could not figure it out. Then God must have inspired me to the answer. Call me stupid all your want, but I believe with all that I am that God makes me successful for the rest of forever#!!

I, Nguyen Khoa Tien, am aware that I am not officially degreed. I have 2 years of official colleges combined credits. Unfortunately, I did not meet the curriculum standards to pass for an Associates Degree. I have been homeless before because I have dropped out and rebelled against my two parents who love me enough to work hard all their lives to support me for a better life than they have had. Through being homeless and a rebel I realize that continuing your studies is the most important thing you could do to help your life. I always say "God" is the answer to all my problems. However that is only part of it. God wants each person to take the next step and work towards their end result that they always wanted.

I give the remainder of my life to God! I'm out of strength. So when you see me produce what seems like it could be a miracle then it is because God has given it to me. When you see the evidence that good has happened in my life it is all because of God's mercy on me for the remainder of my lifetime!!!!!!!!!!!!!!

Do you know it takes at least one hundred thousand dollars in United States currency to raise a child up. Yet the kids never appreciate their parents. They complain and argue and fight with their parents. Their parents raised them up to be successful and yet their kids do bad things in their lives and disappoint their parents.

In this program I'm successful because my two parents taught me 1 key point: Never mess with God! If you've messed with God then "NEVER DO THAT AGAIN."

Well, here is another hard one for me. I've just worked hard to do it the hard way. Since pointers are my achille's heel, I decided to over-ride pointers and use arrays. According to my studies the two are able to be used the same however pointers have never been my strong points. In this INTRO you should just keep it to letters and spaces. At least a word in the proper length should be entered in order for it not to crash. Just pressing enter or entering a short word might usually end up crashing the system and you need a reboot on many DOS systems. The Q key quits each screen when it does not crash.

Hopefully you all like the scrolling affects. It is a bit of work however it is worth it to see it featured for the INTRO. It all comes down to God enjoying my presence so much that he decided to show programming talent in me for the rest of my one hundred years old!

I, Nguyen Khoa Tien, the producer of "JesusGod.exe"! Do you believe in scrolling 10000 (ten thousand) letters, numbers, and/or symbols across? I didn't think so. hehe That's okay. I don't know if it'll work either. Maybe we'll get a memory buffer overflow? Have fun trying to maximize the input your want#!!

Jesus Christ.

Once upon a time my two real parents wanted me to be an Engineer. Well, I've been granted "Software" Engineer title. I can do "miraculous" tasks without knowing it! I think it is boring. However I remember someone programmed Pac-Man and I never forgot it. The Arcade Pac-Man series are awesome. They are classics.

I will tell you a funny story. My parents used to run a store. They had the vendor come in and open the quarter input panels. Well to tell the story my father cheated. It is funny because every time I wanted to play Pac-Man my parents and the vendor would have the slot portion mimic a quarter had been entered when in fact they took that same quarter out and re-used it. haha

Another story is I was having a hard day. You think that your job is not important. However even singers make people feel happy. I was sad and the songs made my mood light up and I wasn't upset anymore!!!

The moral of the story is no matter how small your job is even if it seems you are doing nothing except listening to your parents it makes someone happy! What if your parents had passed away? You remember them that it is your turn to be following in their footsteps.

Most important of all, from the producer of "10000" never forget God!!!!!!!!!!!!!!

Honours to my real mom Huong Thi Vu  
Honours to my real dad Nguyen Binh Thuy

Love to my real sister Nguyen Khoa Thuyen  
Love to my real sister Nguyen Khoa Thi

I hope it doesn't crash on you before you hit 10000 characters and that is like 10 screens full of

I, Nguyen Khoa Tien, solemnly affirm that I receive my official education from my real parents (dad, Nguyen Binh Thuy; mom, Huong Thi Vu). Officially I almost have 2 years from college. I never graduated highschool, nor college. However my friends over at Borland donated Turbo C 2.01 to me last year. All they ever asked of me is that I place their copyright on all my works if possible! And the main credits go to Jesus Christ because God came into a body in human form and the human form name Jesus Christ came to save all people. I have two sisters that I love and I hope they take perfect care of my parents. Nguyen Khoa Thi and Nguyen Khoa Thuyen are wonder people bless through God from my real mom. I know I am not perfect. I have a criminal record everyone knows about. However, I have reformed and they can't do anything to me anymore. The evil people can hate me all they want. However, they know I'm not evil!!!!!!!!!!!!!! I try hard to be The King Of Programming, and the truth is that I am only in my first years of actual serious work. This program in this attachment is only the beginning of one of the works that are possibly useful to Computer Scientists. The formulas are my own inspired by God#!!

I, Nguyen Khoa Tien, although a drop out am able to program successfully because of God! God just gives me two parents who sent me to school for programming. They spent \$7000 on my community college education when you think that I was sent to home school and such. Not much compared to UH at \$40000 for 4 years, but I can do calculations far surprising even the likes of my little brains. Even with poverty income I'm able to produce DOS softwares on a regular basis. That goes to show the power of God. When college kids go to school and get a degree they can use and not do so that is a disgrace to their parents. In America you have an opportunity to further your education. Whether you stay home all day long and have no money does not give you an excuse. Everyone has internet now a days. They can GOOGLE all they want and find out something new.

Well, I've been programming quite a bit lately. I guess it's time I'll just say a bit about myself. I enjoy going to Lehigh Carbon Community College in Schnecksville, Pennsylvania. Between 1990 through 1996 has been a wonderful time there learning about computers. Most of my education are there. Then I went to Lafayette College in 1996 for a summer semester. My greater achievement was I took Calculus and got an A. I remember asking a lot of questions and working hard on my studies. I remember buying two thick Calculus books that are different just for

clarifications. My professor Art is proud of me and helped out in my learnings.

At L.C.C.C. (Lehigh Carbon Community College), Professor Beth Leppig, Professor Mary Rasley, and Professor Mary Hovik were so generous on me. They gave me so much help that I ended up excelling in computers especially programming.

My two real parents, Nguyen Binh Thuy and Huong Thi Vu, worked hard in USA to send me and my two sisters to school. Although I never finished, I hope I can continue my studies out of school on my own. A lot of kids go to get a 4 year degree at a major College and never end up using it. Well I never finished and hope I keep going on to do great things with my life!

I was never a good student. My strong points are mathematical calculations where I usually get 90% to 100%. Programming comes second. I'm a failure at everything else. Maybe one day I can support myself and make my parents proud of me. If I were a parent I would want only to give to ALL my kids. I don't expect anything from them except for them to grow up and be success people never having to work for anyone. They provide a service for others that are valued and can take care of themselves. When they no longer burden myself or my wife whomever she might be I am happy they could do it all on their own!!!!!!!!!!!!!!

All my life I've worked to support my family; FROM MY MOM to all my future kids, I've worked all this time to prepare for the future for them. To see them go through what I've been through would be sad for me, but I know they'll get through it. It takes years to grow up and finish the phase where you are a rebel.

God, I ask for the words that lasts for the rest of my life so my family is gleam happy!

"Well, in this one I've perfection the turn of each character precise#!" At the 3rd position of the character entry it copies it and turns it 90 degrees clockwise.

Honours to my real mom Huong Thi Vu  
Honours to my real dad Nguyen Binh Thuy

Love to my real sister Nguyen Khoa Thi  
Love to my real sister Nguyen Khoa Thuyen

Somewhere along the line there was an anonymous donation. No name was given to the following formula:

```
(int)(centerx + (cos(currentradian)x radius));  
(int)(centery + (sin(currentradian)x radius));
```

x radius stands for times radius

the first part of the formula is the x-cartesian coordinates of the graphics  
the second part of the formula is the y-cartesian coordinates of the graphics

I always like to give credits to God for this formula because I always have it on the tip of my head!

Many years ago when I was 14 years old I studied highschool algebra and my teach Professor Murphy taught me the cartesian coordinates. In fact Murphy is a famous name for "Murphy's laws". The laws state that anything that can go wrong will go wrong. I don't know if the professor is the same Murphy with that famous law however I studied under a professor of the highest calibre of algebraic computations.

I have created a formula to rotate the letters, numbers, and/or symbols 360 degrees. The first 3 or 4 characters are rotated as you type them in. However, there is a challenge before it can be accomplished successfully. For those of you who have modern systems DOSBox 0.74 is necessary. DOSBox 0.74 has a configuration file that allows you to alter the maximum run speed of your program. Please set it to "max". This gives it enough speed so it is working smooth and reliable.

Otherwise for those who have regular DOS on old hardware, you may need hardwares that are 800mhz or higher to accomplish the same thing without DOSBox 0.74. regular true DOS on true hardware should work however it may need some tweaking and recompiling.

Jesus Christ.

Honours to my real dad Nguyen Binh Thuy

My real dad trained me the best he could to be an in demand programmer!!!

Honours to my real mom Huong Thi Vu

My real mom tries hard to teach me to be nice#!!

Thank you God for somehow passing on the genes of my two parents that makes me able to provide for them perfect.

Love to my real sister Nguyen Khoa Thi

She graduated and became the first one to succeed in the family officially.

Love to my real sister Nguyen Khoa Thuyen

She graduated second and became the second but most loveable one in the family.

As for me I'm happy to be the one who does the dirty work unofficially producing on ancient hardwares haha

Content: The program shows that it expands a portion of the input 2 times.

The function I wrote through the inspiration of God can easily be modified to expand to the maximum possible.

It is flexible enough to work on any systems.

At least I would like to think I am The King of Programming although I'm really a newbie when you think of it.

Jesus Christ.

Honours to my real dad, Nguyen Binh Thuy, for trying hard to be the one who got a better life for my real mom, Huong Thi Vu, and us 3 kids, Nguyen Khoa Thuyen (youngest), Nguyen Khoa Thi

(middle), and Nguyen Khoa Tien (me). Thank you to my real mom Huong Thi Vu; I wish I could somehow take perfect care of her now adays. Thank you to my two real sisters. Many of you would not know this however they're the ones who make me proud they graduated officially and I never didn't.

In this freeware I continue to develop my routines for graphics work. Not only is it able to expand any portion of the graphics screen, it is also able to shrink it!

Thank you God! Although it has been done before in other softwares like Adobe PhotoShop CS2 it is the very first few routines that I am happy I developed on my own without knowing how it was done from others.

I do owe credits for the VGA graphics screen to David Brackeen.

Also, I owe credits to being able to calculate circles to Mrs. Patricia Murphy who is my 9th grade teacher from Holy Name High School.

She taught me the Algebraic computations!!!

Quadko who's name is hidden deserves credit for giving me the gamepad routines.

There are so many others who've helped me out along the way.

haha God tells me of a theoretical model to make your own sprites in the scrolling routines that you have been seeing. So it is in the works. You can change the fonts to your own have it saved and loaded and it scrolls your own fonts and your own colors. You can even make the letter A look like a liberty bell if you want. Remember if you take this idea and do your own it came from me first! hehe

O - well, it looks like I'm a failure. No new one so far this new day. For the first time in the history of the world a record has been broken. It has been 3+ hrs pass and no new results. I'm sorry I'm late. I'm tired and I've been busy fighting against Satan and their people and followers!!!!!!!!!!!!!! hehe For what it is worth, we (good people) will win for eternity#!! What history has taught is God has a reason for everything.

Jesus Christ.

Well, I could not get the pointer problem fixed. However honouring my real dad Nguyen Binh Thuy I went and did the backup method. My dad always told me to have a backup and it works that way. Honouring to my real mom Huong Thi Vu. She tells me that I need to keep trying and I succeeded because of her words. Love to my real sister Nguyen Khoa Thi and Nguyen Khoa Thuyen. They succeeded first before their older brother (me).

This INTRO is a prototype so that you can define your own character set.

Eureka! Sophia, I think I've got it. haha

Well, I've actually cracked The Programmer's Bible. I defined my own custom character set and allowed the end-users to make their own. I have a few things left to make it public domain if at all. However it needs a save and load function so the custom character sets are your's forever. It

also needs a bit of instructions so you could understand how it's accomplished. So far only 2 characters is allowed to be customized by the end-user. However with a bit more work all the basic characters of the alphabet and numbers should be possible.

---

---

God is the true creator of ALL! After all, God created all people especially my two real parents [mom: Huong Thi Vu, dad: Nguyen Binh Thuy]. Then God created through them my two real sisters [middle: Nguyen Khoa Thi, youngest: Nguyen Khoa Thuyen]. Of course, God made me: Nguyen Khoa Tien.

I would extend my kindest to Borland for donating Borland Turbo C 2.01 for my work. It is all I need for a compiler. Also, DOSBox 0.74 has been an extremely kind donation. I have so many people to thank, and I know I can never know how to express my greatest love for them all. It is my pleasure to present this work.

In this program, you are able to create your own character set.

GOD! Well, this edition is a little bit cleaner. Actually it is a lot cleaner. At least in spirit it is cleaner. The only missing thing is the save and load features. The character set can be changed however it would be lost the moment you exit the program. So just for the fun of it you could just do a few characters. It is up to you however this is licensed to be public domain. I'm not ever selling any of my programs. However I'm allowing it to be used by others. Just like Borland is the true creator of their compiler that I use. Just because I might end up paying them money doesn't mean that I made it.

Anyways, you have to go to the screen where you see the rainbow of letters before you could edit the characters.

The ~ (tilda) key activates the editor.

In the editor you use the I-up, J-left, L-right, K-down, space-put color down, > cycle color right, < cycle color left, and q to quit back.

After you have made your own character you can use the \_ (underscore) key to find where you

want to save it.

In the save section after pressing underscore you cycle through the letters using < and >.

Once you find the letter you want the new character to be in press the + key.

If you want that new design anywhere else just cycle again and press + (shift and =).

q when you are ready to return to the scrolling rainbow of letters.

The letters you have placed should now be changed to your letter/number/symbol.

Please know you need at least a blank dot around the letter so it would not smear.

Thank you.

GOD! As you well know the final one is already out. This is a continuation to fine tune the final. The final is the basics so you could do with it. This is just so you can save and load your own characters that you have made so won't lose it. There's still work to be done maybe. However the + key while the letters are moving on the rainbow is the save character set key. The = (equal) key loads it.

Jesus Christ.

Honours to my real mom Huong Thi Vu

Honours to my real dad Nguyen Binh Thuy

Love to my real sister Nguyen Khoa Thi

Love to my real sister Nguyen Khoa Thuyen

Content: Through praying like my grandparents wanted I succeeded today!

You are able to now make all letters of the English alphabet and all the basic numbers of the English system. A few symbols are possible to be changed however you can use it the way you

want. For instance if you are missing the carrot symbol you can make it and put in the exclamation. Then every time the exclamation comes up it has been changed to tghe carrot sign.

Saving and loading is now only possible for the first set however you can rename "save.chr" to something else and make a new characgter set. So when you need the old character set just know you need to rename it back to save.chr.

Well, I'm speaking through this human body from Heaven. Right now there's not much to do. Other than that most of what this host is able to accomplish is done.

The Programmer: Nguyen Khoa Tien

His father: Nguyen Binh Thuy

His mom: Huong Thi Vu

Sister who went through much with him: Nguyen Khoa Thi

Other sister who is too young to know: Nguyen Khoa Thuyen

These 5 hosts are bless for the rest of eternity!

I am a pee in the grand scheme of things. God is the one who puts programming skills into my soul! What I produce is a product of my two parents (dad Nguyen Binh Thuy, and mom Huong Thi Vu). My two sisters would also probably think it is amazing that I didn't graduate officially and yet somehow been able to produce this circular text movement.

Some of you may know that my father Nguyen Binh Thuy loves me so much that he pushed me to go to college when I was only in 10th grade. I took part time college credits while in 10th grade! He (Nguyen Binh Thuy) wanted me to excel above expectation. Remember, I was going to highschool full time in addition to going to part time community college..... My mother Huong Thi Vu only graduated highschool, and I'm proud of her anyways. Although a kid growing up in USA I should have an advantage. The truth is it was hard on me even with the advantage. So I could only imagine how much harder it is on someone almost set in their ways being an adult.

However, the main point my parents taught me is with Jesus Christ all things are possible!!!!!!!!!!!!!!#!!

Not only did my real mother Huong Thi Vu continue to complete her Pennsylvania food and health safe handling certification, but she also went on to have raised two kids (Nguyen Khoa Thi, and Nguyen Khoa Thuyen) to graduate officially from America. My two sisters now have families of their own all thanks to God and my two real parents.

In this edition, the normal Paramount circular letters is now sliding from left to right and vice versa. So when you see TIEN circling it eventually slides left to right and such.

Well I often joke and say "I am The King of Programming!" I guess it is for me to fantasize about and for the people to judge for themselves if it is proven true. All through my life my parents named me "Tien Khoa Nguyen" and they left out the Vietnamese symbols until I grew up. Now I'm 42 years old and a full grownup. I can't believe I'm that old now. A few grey hair has crept in. My mustache and beard are starting to grey and it is only a few strands of hair. So I reason I have much longer to go before I'm sedentary. Actually I should just say I worst than sedentary now since seeing some of the elders with all gray hair do house work.

To cut to the chase (so clichéish): This one contains the algorithm to 42 years of mathematical training. I first started with counting the numbers when I was in my parents care a baby boy.

Then I eventually reached Calculus. Today I hope to combine all my numbers into a complete whole. The mathematical formulas are a cumulation of 42 years of the harshest training. I'm not the best since my relatives have gotten 100% perfect score in Calculus and other grades. I only managed a low A in Calculus.

Did you know in The Vietnam community that we are all trained to be talented. It is true. I'm the lowest however because I'm God fearing and Jesus loving my elders choose me for the rest of my life. It is a tough thing to be the one who holds the torch in your culture for the rest of your life!!!

I wish to thank The United States of America for giving my two real parents the opportunity to be here. My real father Nguyen Binh Thuy loves this land of opportunity, and so does my real mother Huong Thi Vu!! I'm also happy that America has somehow allowed my two younger and only sisters to graduate officially from accredited-in-person Universities. My youngest sister went to The University of Houston, while my other sister went to Millersville University. Both are talented in their fields. The first in logistics and the second in Computer Science respectively. I'm happy God gave you the talents to graduation officially my two sisters Nguyen Khoa Thi and Nguyen Khoa Thuyen.

Of course Jesus Christ always ends up saving my butts. I'm the least of my family however somehow through Divine grace I am given the knowledge of The Spirit of Eternal Love for True family and true FRIENDS!!!!

Love to my real sister Nguyen Khoa Thuyen

Well, I've been praying. This program is a result of Divine guidance and Divine intuition. It should be easy to make your own character set now. It took awhile to get to the point where it doesn't smear. However it has been completed. I know I've made too many refinements however that is the life of a programmer that is producing a product people demand. Did you know when I was in Lehigh County Community College the Professor had us programmers test our programs extensively before releasing it? It is true we were graded on how easy the programs were easy to use not just on how powerful it is. After all the end user is not going to be sitting there and knowing everything there is to know about a computer right off the bat.

Jesus Christ.

Honours to my real mom Huong Thi Vu

Honours to my real dad Nguyen Binh Thuy

Well, many of you might not know that my two real parents I just mentioned had a good life for 12 years however it took a lot of help! I remember it wasn't easy. We all had to do our share of the work. If one of us stopped working it meant someone else had to do double the load! So being on welfare I know I have the time to develop routines. In fact in my welfare statement it specifically says I have a certain amount of income for my work. However the work I do is on a voluntary basis. I can choose to do it on my own schedule up to a certain point. However there is a deadline more or less.

Anyways, here is my next day's work for today. The t key turns the character any number of degrees you wish up to 359 degrees. The c key captures the turned character back after it has been turned. I did not make it automatically capture it back just in case you wanted some other degreed turn. So you can make sure that it is what you want before you capture it back. It is complex however by playing around you should be able to get used to it eventually.

The colors start off at color number 16 so please cycle backwards to see the full colors. The forward colors are usually darker shades reserved for palette entries for subtle details that have yet to be defined.

I have predefined 1 custom character set that you can over-ride with your own.

Love to my two sisters Nguyen Khoa Thi and Nguyen Khoa Thuyen. They work hard for their family to be gleam happy!!!

Thank you Jesus Christ; after I prayed today the routine ended up working just like I wanted!!!!!!!!!!!!!!

Jesus!  
Chua Me O!  
Jesus Christ!

Here in this one we have the introduction of possible engineering using controllers. I've been experimenting with mechanical devices. Nothing much. Also, fans are known to be mechanical devices. Anyways, in theory given the right impulse signals from the computer I should be able to control a mechanical device. I've been able to successfully reproduce an impulse signal of 5 volts so the fans spins. Now the trick is to have the program send the impulse and it should not be too hard??

O well, I tried 3D modeling. This is so far what I have. It's kinda getting there I guess. hehe I spent a good 2-3 hours on the formula. It is pretty cool in my opinion. It shades the right length, but not the exact height. However the formula works for the most part shading. You can tell it's 3D-ish. Just press the W and S keys to move the shading.

Thank you God for giving me two perfect parents who put me through the school of hard knocks

to get some 3D modeling into my brains. I don't have a big brain at that.

My father Nguyen Binh Thuy would probably be very glad had he still be around today.

My mother Huong Thi Vu would be rejoicing for great happiness had she be around to see me collect money that I don't see. hehe

My two sisters Nguyen Khoa Thi and Nguyen Khoa Thuyen would probably be realizing it's about time I stayed up and pulled and all-nighter.

In this program, we have perfected our 3D rendering. So you can see the box being traced. Initially we had to do a lot of mathematical calculations. However it is worth it. The results speak for themselves.

Thank you Jesus Christ.

God is definite the ONLY good!

Well my real mom Huong Thi Vu comes second.  
Then my real dad Nguyen Binh Thuy.

Of course my sister Nguyen Khoa Thi taking the lead.  
And last but most adorable Nguyen Khoa Thuyen the youngest.

Okay, in this INTRO we have made major progress in our algorithm. The mathematical formula has been upgraded so now it is able to travel backwards.

Please use the A,D,W,S keys for the left position.  
Then you may use the JKLI keys for the right position.

The + and - keys expands and contracts the cylinder.

Like usual Q quits.

Thank you Jesus Christ.

Content: Jesus Christ!

Ever wondered if it could be done in DOS? Those movie flicks that show the top secret government computer analyzing buildings in 3D? Well don't wait anymore. Download this and see the 3D building analyzed for yourself.

Thank you Jesus Christ.

Here is a slight twist. You can use the XBOX360 controller if you have one. The PS One controller is also compatible. Please make sure it is able to be plugged into a USB port for Windows before you purchase one. Thank you.

Alternatively you can use the keyboard to spin the 3D cube.

Content: Programming is a gift from God through my two real parents.

The above programs are a cumulative lifetime learning of 42 years of knowledge all combined into 1 single program output and 1 single source code using Borland Turbo C 2.01 and DOSBox 0.74 with two controllers (1 from Microsoft XBOX 360 USB, 1 from SONY PS One USB).

The rest of my journey is just building from those 42 years of basic lessons. If I had to say what was the most important words I had to learn in my life it wasn't a word at all. It was learning to crawl.

Learning to get strong enough to turn on my belly...

Content: God is the only and greatest good from now on for eternity for me.

Here in this program we have a cube that is able to be expanded and contracted using the - and + keys. You can see it really turns by using the j and l keys. Alternatively for left handed people you could use the a and d keys. q quits like usual.

Thank you God that although I am a nobody that I hopefully support my family from now on glean happy!

Content: God is the only good.

Well we have been busy. Therefore we are going to take a little detoure and go into assembly language instead of C. Now we are using Borland Turbo Assembler 4.1 (or Borland Turbo Assembler 2.51). In this program we just have the basic template of a assembly program. If you look at the source code it contains less than 12 lines. It is simple however it is the most important lines you will ever want to know in assembly. Remember before these 12 lines comes God then my real family mentioned above. hehe

Remember, previously we left Borland Assembler because we did not have enough credits. Also, remember that we have been giving Borland credits for the copyright of the C programs ever since we left the Borland Assembler. So now we have enough credits to use Borland Assembler again.

Basically it is like working for Borland every time we put the copyright sign giving Borland the copyright to my programs.

Content: I am humblest to the point there is no less humble to God#!!

I have to confess that working for a full year full time so far is tiring. It is not all that it is cracked up to be. I took some time off for a day to celebrate my moment of glory seeing the progress and breakthrough that I've made. Unfortunately it is not enough. Compared to others I don't know. That is for others to judge.

In the mean time I continue to do what I like and that is programming. You know what they say? If you like it then you end up doing it for the rest of your life instead of just for a moment.

For instance many people go to a job like programming and work until they are 65 then they retire with grandkids, etc. Others go to their job and retire and leave what they were doing at work. Well if you really want to succeed you have to prove you are going to be doing that occupation for the rest of your life even at your 100 years of age!

An example is I consider myself The King of Programming. So if I really am The King of Programming I have to prove my worth until my last dying breathe on the computer. I don't think I have what it takes. However, if God willing I have enough to take care of my family and just enough to keep myself happy with the computer programming as my hobby at least. At most maybe I am working full time as a programmer and taking perfect care of my family until my last dying breathe. Even after my death my family are taken care of for eternity! That is the ideal scenario in a perfect world.

Jesus Christ! Continuing with our programming career (at least mine) we have decided to make a subtle adjustment. The original 3D box that has been turning and shaking horribly has been controlled to a fine degree. You can now see it actually turning on its axis of rotation. So when you turn the box it does not just jump and skip a gap. Now it moves by a pixel.

God, Jesus Christ, is number one!

Jesus!

Chua Me O!

Jesus Christ!

Well, I've just told my cousin that I consider my big brother of my new routine. It might not be something new. However to me it is a major accomplishment by the grace of God through my two parents (Nguyen Binh Thuy dad and Huong Thi Vu mom and my sister Nguyen Khoa Thi and my other sister Nguyen Khoa Thuyen). Base upon this formula you are theoretically able to turn any object and model it in 3 dimension. If you have ever seen the 3D wire outline of a body that turns 360 degrees then this formula is the basics of that. It just tries to go a step above and turn the body in any angle. It is a success in this INTRO since it is able to do so with a cube THANKS TO GOD!!!!!!!!!!!!!!

Jesus!

I almost forgot, the previous version only rotates left to right. The most recent version just posted before this post also rotates from top to bottom. So if you see that it seems to look the same it really isn't. The adjustment is so flexible that you can rotate it a certain angle up or down and then rotate left and right making it any angle. The 3D body modelling is just an extension of this formula. It is the best work I have to offer to date. Maybe I will never have anything more new to add. Remember that guy who made the light bulb? Well it was all he ever seems to be known for yet everyone uses it in the world. Just like my real dad Nguyen Binh Thuy flew my mom and me and helped transport us over to the USA. Although it seems that was all he did it seems the life we have in America is more than worth it. So my real mom Huong Thi Vu carried me when I was a baby during the flight. It seems so little yet I am alive today to enjoy life. My sister Nguyen Khoa Thi sent all her paychecks from work and school to fund me during my homeless days. However I am here alive today with the help of my mother. My last sister Nguyen Khoa Thuyen doesn't seem to do much except nag. However she provides a place for my mother to stay at when I'm upset or annoyed and need my space to do my work programming. So you can see my

work would not be possible without at least my family's complete support.

God, Jesus Christ, is number one.  
Jesus Christ.

Remember when your parents told you something? Well what they do is up to them. However the best we can do is remember the good that they have taught us by God's grace! At least one thing is without our parents we would not be here. Thank you God; I don't know what the best course is to go in my life. However I just made a scatter plot that analyzes 64000 pixels within seconds. It doesn't do much however it scatters an image and blurs it.

Honours to my real dad Nguyen Binh Thuy for he sent me to school for programming.  
Honours to my real mom Huong Thi Vu for she helped in raising me.

Love to my real sister Nguyen Khoa Thi; she's been there from time to time when I needed it the most.

Love to my real sister Nguyen Khoa Thuyen; she's the youngest and most adorable of us all!

Thank you Jesus Christ.

Jesus!

Chua Me O!

Well honours to my real mom Huong Thi Vu, and my real dad Nguyen Binh Thuy. Also, love to my real sister Nguyen Khoa Thi and Nguyen Khoa Thuyen. I guess it's over for me? I'm not sure. However it seems I'm tapped out of fresh original ideas. Even Moses could only lead the God's people for 40 years then it is delegated to the other elders while he took the most important matters. I guess I'm not The King of Programming that I so claimed after all. If I invented something that is worthy of respect or honour you know I give God the credits first then my two real parents.

Anyways, I haven't talked much about others projects since I didn't get the chance to download too much for fear of it being abandonware and also because I was being picky. However if I had one thing I had to choose I would say everyone deserves being recognized for their efforts. Just like a kid might only be able to learn the number 1 there is nothing much you can do other than praise the kid for a job well done. However there is much more work for the kid who persevere. Eventually that kid might become a mathematical genius!!!

Honours to my real dad Nguyen Binh Thuy

Love to my real sister Nguyen Khoa Thi

Love to my real sister Nguyen Khoa Thuyen

Content: God is still in the running!!!!!!!!!!!!!!

Well here is a little technicality. It uses God's gift to me:

```
ix = (int)(centerx + (cos(theta)*radius));
```

```
iy = (int)(centery + (sin(theta)*radius));
```

Anyways, you can plot any letters or numbers around a circle. You can even so far to write a message around a circle. This INTRO just has the letter A!!! There is still more work to be done before that could be accomplished. It is God's grace that I am able to do these programs because both my parents told me according to The Book of Exodus to honour both my parents!!!!!!!!!!!!!! Exodus is in The Book of The Holy Bible. For instance KJV (King James Version), etc. is The Holy Bible.

Here's a little story that is true that I'd like to tell since my real father is no longer with me.

When I was 23 years old I told my father I was quitting Engineering studies to go to Hollywood and be famous.

My father totally lost it.

He tried to keep calm and didn't know what to do.

So three times he said in his own way to please reconsider son; I love you!

I was stupid and didn't listen to him.

I went and ate out of the streets shelters.

Two years later I came home to my mother taking perfect care of me nurturing back to health.

Now it is my turn I say to take care of my mother.

My mother says it is the other way around; I love you!

I was stupid again and didn't listen this time to my mother.

Now I give it all up to God!!!

God, Jesus Christ, is number one#!!

Jesus Christ!

My father and my mother always taught me programming is my life. That's all I ever really know.

In this program is the same formula:

```
ix = (int)(centerx + (cos(theta)*radius));  
iy = (int)(centery + (sin(theta)*radius));
```

where:

theta is equal to radians between zero and 2\*pi

I'm retired. After producing 2 things to my name I don't know if I have anything left to give. Remember the guy who invented the laws of physics? He was only able to produce 1 thing in his life. Einstein has the formula from God  $E=mc^2$ . So I don't know. What more I could produce?

I am the one who serves Moses's God! In other words, the very same God who made Adam and Eve in THE GARDEN. In other words the very same one who created me, Nguyen Khoa Tien and my real family!

Here is a photograph of the real Jesus Christ back about 2000 years ago!!!!!!!!!!!!!!

When you press the q key it quits to the faint scanned outline of Jesus Christ.

Enjoy, from The King of Programming - me

Jesus!  
Chua Me O!  
Jesus Christ.

Honours to my real mom, Huong Thi Vu.  
Honours to my real dad, Nguyen Binh Thuy.

Love to my real sister, Nguyen Khoa Thi.  
Love to my real sister, Nguyen Khoa Thuyen.

Content: God, Jesus Christ, is number one!!!!!!!!!!!!!!

Well, the day after Valentine's Day I have to say. haha

I'm joking, but the end has come.

I've given my best.

Anything new is from God#!!

I might not have anything left to give.

So I hope all you who wanted to see me fall are happy.

I know people want to win so bad that they would cheat anyway they can to do it!!!

That is okay because I am no different.

Remember the main formula?

$$ix = (int)(centerx + (\cos(\theta) * radius))$$
$$iy = (int)(centery + (\sin(\theta) * radius))$$

theta is between zero and  $2\pi$  inclusive

Well God told me it is God's gift to me.

So I didn't do it.

If it is mine then I would know how it is come about.

Of 1703 lines of coding 2 of the lines above are given to me from God.

That means I'm a nobody!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Thank you Jesus Christ.

[Added]

For the rest of eternity: Thank you God with all of me.

Well...I've been a little down lately. I have perfect expectation for myself being God fearing! So when I couldn't produce something I get a little more than a little upset. However God has favors on me today and has given me this program. This is for my Vietnamese fans. I hope you like it. I wonder if you're able to figure out the letters. hehe

Thank you Jesus Christ and of course my two real parents after God, and of course loving greets to my two real sisters. And I couldn't forget all my families and friends.

I call upon my God for eternity!

Well it looks like I'm out of ideas again.

Hopefully I'll go out with a bang at 100 years old. haha

In the time being I'll just come out with what I can.

It might just be a dot on the screen like before.

Or maybe it is just a few lines of coding that does absolutely nothing is what it'll be.

Whatever the case may be I hope you enjoy while I'm alive.

Just like I never tire of the Sun rising in the morning and setting in the Evening I hope you never tire of me!!!!!!!!!!!!!!

It is always the case in Vietnam that not making your parents happy means sadness for a person who is born from their parents.

I pray that one moment I make it up all to them eventually.

The program above only contains some lines of text. However it shows a lesson that my mother always loves to tell. Being an immigrant once she says it is hard to live. However eventually we are able to have a place of our own that we can call home. She thanks Jesus Christ every chance she gets that is reasonable! My father is the same way.

From my two real parents and two real sisters, I've learned to persevere like my grandparents say. I've learned to live each day to the fullest thanking Jesus Christ for what I have.

Well I've been working consistent on this 3D box rotation bouncing around the screen edges. There has been a few glitches that were surprising, but not desireable. So I decided to streamline the routine to what was supposed to be produced. This is how it is SUPPOSED to come out! I hope you like it. All my learning from school took me 43 years to complete. It uses one of the basic principles of Algebraic computations when I took advanced Algebra in 9th grade at Holy

Name High School. It is funny that I had a crush on my teacher, Mrs. Murphy at the time. Although I only got a ninety-three percent on my whole course I still remember the most important principle. Many times it is not the grades that matter at the time when we are little. However it shows how much we love the other person. I tried hard to win however there were other students who got 100%; good for them. I'm not perfect and I'm not the best. However I'm happy with what I'm able to produce. Thank you Jesus Christ.

My two parents, although an immigrant from another country, put me through school in America. It is so important that the parents get credits for our successes since we would be sitting ducks today.

I've been working on mutations of the formula from God:

For instance:

point x = (convert to integer)(center point x + (cosine(radian)\*radius)  
point y = (convert to integer)(center point y + (sine(radian)\*radius)

It now has a 3D box circling around a center point. Not only that, but also the box is circling too!

So I am going back to programming in Borland Turbo Assembler 4.1. This is my first program on my first day back. I remember when I was a kid I had to count from 1 first before I got to 10. So consider this 0. It might take me 58 years, but I will manage somehow to keep at it.

Since my mother purchased the Borland Turbo Assembler 4.1 package it is not necessary to give the source code.

God is the ONLY good!

Today we talk about source codes being demanded to be handed over by the government?

First there's nothing to hide. I'm the creator of much new technology in the old system because I believe in God. I have a gift given from God, period.

Second, if I'm going to support my family against giants like Microsoft I can't just be giving it away

for free when Microsoft is cruel. They expect you to pay for everything they have.

Third, Borland, thank you; I hope you don't mind me using your copyrights forever.

My father Nguyen Binh Thuy is a soldier. He says freedom is the reason we came to America. If I am forced to give away the luxury of life over to the government then might as well be in Vietnam since that means we are communist here as well.

My mother says do not deal with the secret service people. She wants a normal life and I intend to honour her wishes. I don't want people all over the world to be at my doorsteps night and day.

My two sisters work hard and graduated. I don't want to see them work for free and be living on the streets.

Remember in the past life? The devil is on the side of the government and killed Jesus Christ who's on the side of God. So I'm on the side of God with Jesus Christ. If the government wants they could easily steal my source code. I can't stop them since they have guns and weapons. I'm a peaceful person and choose to honour both my real parents. I choose to bless my mom for the rest of eternity. My grandfather who passed away says in his own way people can steal your program from you. However you have the knowledge to make as many as you want. My grandmother is a God loving person. She is 87 years old and growing to 100 years old. My father Nguyen Binh Thuy says just let them steal if they want since you are outnumbered and can't do anything about it. It's their territory. My mother says just work and try the best you can to keep it to yourself. My real mother Huong Thi Vu says at least you are getting better so what they take won't be that good compared to what you end up making later thanks to Jesus Christ!

ISSUE: Microsoft is offering a Windows 10 upgrade?

According to some articles recently some people are possibly being forced to upgrade to Windows 10 against their will.

I personally am afraid Windows 10 is a high security risk for programmers. I've seen personally on a first hand basis sitting in front of my Windows 10 how Microsoft is able to change your programs as you are working on it. However my situation is a little different. At the time I welcomed it since I was just trying out Windows 10. I really liked it to program in however to have someone from the outside mess with my source code and eavesdrop on my source code is too much for me.

Remember at the time I welcomed the remote session to be controlling my computer with full control. So Microsoft has made Windows 10 to be fully functional from anywhere in the world at a distance.

I have nothing to hide however I do expect my source code to be what I wrote and this is not going to happen with Microsoft being a big programming group. Of course I'm thinking the worst however my source code is a source of pride for me. That's what makes a product valuable in the first place. Imagine a car with a source code written so that it turns the wheel crooked? That would be horrible. So the program can end up being more valuable than what it controls at times.

Personally, I like Windows 10 EXCEPT for the fact that it is meant so that Microsoft can fully control YOUR computer.

Here I was sitting at my work and God came to me and told me I must honour my real father Nguyen Binh Thuy and my real mother Huong Thi Vu.

So in this one is an embedded bitmap. The novelty is that it embeds a picture into your program making it a single file. Usually you need to load the bitmap file before you can show it.

However if you look carefully you only see one file.

Well what I've been doing lately is to reduce the size of the program and the complexity of the program so that the number of possible errors are zero if possible. I did not like the random number generator since it could lock up the computer so I took it out mostly. Whatever is left of the random generator I decided to try to bypass all of it and do a manual maze.

Jesus Christ!

Well by the grace of Heaven I have been lucky to receive a laptop from my cousin who works at a hospital and saves lives for a living. It is an old laptop with XP on it. Since the ATI graphics GPU is overheating and the cords are freyed because of the dog bites I decided to stick on the safe side and throw out the laptop. Before I threw out the laptop I salvaged the XP and transferred it over to my MacBook Pro. I hate to say it, and I'll put my pride aside and say Windows XP is a great system. I like it.

This time the cheat key works for all the levels although there is fifteen of them. You just have to figure out what the cheat keys are. Unless you want to play it fair you will have to find the cheat

---

keys.

Turtl Mom with a little color to the level with the circulars.

This has just been tested on MS-DOS 6.22 however the controllers usually only work for DOSBox 0.74 unless MS-DOS 6.22 uses a converter of some sorts.

Well many of you know that I've been producing Turtl Mom for a little bit now. There are 25 levels or so. You pretty much have the latest for the most part. However I've put it up for sale on eBay. I'm only selling 1 right now just to see how it goes. I haven't seen any rewards yet for my work concerning money, but I'm happy for the most part. I just want to be able to eventually be able to support my family before they pass away and I couldn't do anything for them. My father is 70 years old and such right now. So I don't know if he's still going to be with me. I miss him. I hope he has family watching over him.

My mother is still with me thanks to God. She is 63 years old going on 64 (get it? 64-bits - silly joke). Far from 63 billion that Bill Gates has but I saw how hard she worked for her money so I'm trying to follow in my family's footsteps.

To make a long even longer my two sisters are working for companies now and getting paid while I'm still at home at 42 years of age collecting no money. So I figure I'm trying to sell 1 copy of this game. At least it gives me some feedback. If no one buys my 1 copy that I gave almost every level out on here already then I guess it is not that valuable and something is wrong?

Well we all have bills to pay right? So I'm thinking of my family. I've been focusing all of my efforts into programming however I don't really consider that somehow has to pay the bills around the house.

My mother told me to wait until she checks all the levels. So I kinda am ahead of her request.

Well I know this is unusual and I'm giving out the copy I was planning on selling ahead of time for \$20. There are 2 phases of the game. The first round you must pass 25 levels or so. The second round you go through the same 25 levels with being timed.

In this special update there is a fix for the blocks being messed up by the hand, turtle, etc.

The turtle should no longer chip away at the blocks.

Originally for speed the test for an object was limited to the top, middle, and bottom points.

However when the object's shape passed through the other points it messed up.

Well I've taken up an interest in chess so I have just the preview of the chess board and chess pieces ready right now. I don't know if I'll continue since other chess programs are a lot more complicated. I've seen advertisement for over a thousand moves ahead of prediction during play time. I'm not good. I've only been able to make TurtlMom because of my love for her. I want to make my parents proud of me that I didn't waste their hard work in raising me up. Anyways after my 4 year equivalency at home I'll be continuing with my studies for at least another year. So the road is quite some times ahead.

Honours to my real mom, Huong Thi Vu.

Honours to my real dad, Nguyen Binh Thuy.

Love to my real sister, Nguyen Khoa Thi.

Love to my real sister, Nguyen Khoa Thiuyen.

Content: God bless my mom!!!!!!!!!!!!!!

Turtle Mom now has over 35 levels with cheats and maybe two rounds. Remember to go to almost any level press (level number backwards). So (72) would go to level 27. Without the open and closed parentheses it would not work. Thank you for your understanding. I'm sorry for any disappointments with the game.

Thank you Jesus Christ.

Jesus Christ! April 10, 2016.

nktchess.exe is a chess board and pieces with your move choices

chesssav.exe is a glitchy algebraic notation chess viewer

chess.sav is the algebraic text you make yourself in this exact format

Please note that the glitch happens when the program thinks it's an en passant in certain situations.

Honours to my real mom, Huong Thi Thuyen Vu

Honours to my real dad, Nguyen Binh Thuy

Jesus Christ who died 0 A.D. is the highest class never ever past present future defeat able!
