QuickEntry 1.1 1.1
https://vetusware.com/download/QuickEntry%201.1%201.1/?id=17711
QuickEntry is an easy to use tool for creating standalone dBase entry forms. It works with any existing dBase compatible database file. It includes a menu-driven form builder that lets you simply "draw" your form on the screen. QuickEntry runs as its own DOS program, rather than as part of a database application, such as those created by Fox & Geller's QuickCode Plus dBase code compiler.

SpinRite 1.2b
https://vetusware.com/download/SpinRite%201.2b/?id=17717
SpinRite, by Gibson Research, is a tool that can diagnose, repair, and rejuvenate the low-level formatting and optimize the interleave of MFM and RLL (ST412/506 interface) hard disk drives. Its pattern testing ability is also useful for verifying the operation of SCSI and IDE hard drives.   This version must be configured by booting the floppy disk.   Archive includes one 5.25" 360k floppy disk image. Use WinImage or a similar tool to write to a floppy disk.

SpinRite II v1.1
https://vetusware.com/download/SpinRite%20II%20v1.1/?id=17718
Spinrite, by Gibson Research, is a tool that can diagnose, repair, and rejuvenate the low-level formatting and optimize the interleave of MFM and RLL (ST412/506 interface) hard disk drives. Its pattern testing ability is also useful for verifying the operation of SCSI and IDE hard drives.

VCN ExecuVision Graphics Library 1984
https://vetusware.com/download/VCN%20ExecuVision%20Graphics%20Library%201984/?id=17712
This is library 1, 2, 4, 5, and 6 of the six graphics clipart libraries originally sold alongside VCN ExecuVision.   Visual Communications Network's ExecuVision was the first business presentation package for the IBM PC. It was targeted at business professionals, and was advertised as a

complete graphics art department on a computer. It was also notable for it's clipart collection, which was also a first.   Important: These diks are formatted for DOS 1.x and will not open in tools like Winimage.   Important: These disk contains copy protection. Although it does not contain program code, the ExecuVision software may refuse to recognize the disk if the protection is not present. You must use a Kryoflux, SCP, or Transcopy to fully re-create the disk. Other programs may be able to use the data files without the protection.
