Genewars
https://vetusware.com/download/Genewars/?id=17821
Installed and successfully run in DosBox-X under a Windows 10 Host. CD image in *.bin/*.cue format & Manual in PDF are present in the *.zip file. Please also note: the game gives a "NO CD Error" after install, when trying to launch the game. The solution to this problem is included in the form of the included "CRACK.COM" file and instructions are present in "README_IMP.txt" file. SFX works but automatic in game Audio CD music playback doesn't seem to work. The CD can be opened as an Audio CD in the host Windows system before launching the game in DOSBox if music playback is really desired. It is possible that such problems won't be encountered on genuine vintage systems running DOS natively. Kindly refer to online forums if any other problems are encountered.
