Motorola MC68HC11 programming software and tools
https://vetusware.com/download/Motorola%20MC68HC11%20programming%20software%20and%20tools/?id=18153
This is a collection of software used to interface with Motorola MC68HC11 microcontrollers. Found on the HDD of an old 486 laptop I acquired recently (a Toshiba T1910). It's a self-extracting archive and can be extracted in DOS, but some of the programs require Win 3.x. Each program is in its own subfolder and has a readme, some documentation and software is in Spanish, the majority seems to be in English though. The programs included here are: AS11, BUFFALO, DL68, ICC11, PCBUG, SIM68, SMALLC and one simply named "TRABAJO" (Work in Spanish). LEE.ME is the main readme that explains this whole collection of software and what each one is for, it's in Spanish though. If anyone finds this useful I could translate every Spanish documentation into English btw, I just didn't want to modify anything, this is exactly how I found it, just added it to a Zip file to be able to upload it here.
