FreeNAS 0.7.2
https://vetusware.com/download/FreeNAS%200.7.2/?id=18438
This is an early version of FreeNAS. The 0.7.2 release was very stable and worked very well. It was great for small, power efficient, file servers.   These are embedded builds, intended to be booted from a USB flash drive.   To write the IMG files to a flash drive under Linux, use a command similar to: gunzip -c path/FreeNAS-amd64-embedded-xxx.img | dd of=/dev/sdi

FreeNAS 0.7.5
https://vetusware.com/download/FreeNAS%200.7.5/?id=18439
This is an early version of FreeNAS. This specific 0.7.5 release was a testing-only build and may have had some issue. The 0.7.x series was a very reliable system that was great for small power efficient file servers. This is an embedded build intended to be booted from a USB flash drive. Under Linux, write it to a USB flash drive with a command similar to gunzip -c path/FreeNAS-amd64-embedded-xxx.img | dd of=/dev/sdi
