So I looked at my PDA, and I thought, 'I wanna do some emulation on this thing.'. It is a Dell Axim x30 running Windows Mobile 2006. It is super fast, has Wi-Fi and is my favorite PDA. So I searched around and found Pocketgnuboy. I was a little hesitant at first, but it actually rocks! I simply downloaded PocketGNUBoy, transferred it to my PDA using Bluetooth, and then I transferred a ROM of Super Mario Land. (I used to own a cartridge so I downloaded it legally. ;) Loaded it in PocketGNUBoy and it fan FLAWLESSLY! No lag, great sound. Feels like a real Gameboy. I suggest you try it. Just google 'pocketgnuboy windows mobile' and choose the most reasonable result. Extract to your PDA, and click on the 'CAB' file. Then go to Start > Applications/Programs > Games >PocketGNUBoy. Click File > Open ROM. Choose your ROM and voila! Have fun!
