Maxtor Low Level Format Utility 1.1

<http://vetusware.com/download/Maxtor%20Low%20Level%20Format%20Utility%201.1/?id=12915>

MAXLLF is a utility for low level formatting IDE (PATA) hard disks drives. Technically, on newer IDE drives this simply wipes the drive, but also forces bad/weak sectors to re-map to spares. Supports CHS and LBA up to 127GB and works with any brand of drive (not just Maxtor).

MP3 Jukebox Player

<http://vetusware.com/download/MP3%20Jukebox%20Player/?id=12914>

The DOS decoder is designed to run on low-end systems. 64Kbps files can be played on a 486DX-50 and 80Kbps files on a 486DX2-66. Higher bit rates require more computer. A 4/586 in the 100 MHz range or a Pentium 60 may or may not play the highest bit rate files. The limits of each marginal computer must be determined empirically. A 586-133 should play any MP3 with power to spare.
