### Covox Speech Thing Driver

<http://vetusware.com/download/Covox%20Speech%20Thing%20Driver/?id=13007>

This driver uses a printer port to play sounds. If a sound is playing, the printer port will be unavailable until the sound has finished playing. If the Print Manager (or some other application) is using the port, the driver will NOT play the sound. Like the internal speaker driver, the Speech Thing driver plays exclusively, so Windows will not run programs or respond to the user while sounds are playing. Unlike the internal speaker, the Speech Thing sounds much better. <https://web.archive.org/web/20070318051751/http://www.tkk.fi/Misc/Electronics/circuits/dacs.html>
