Rebirth RB-338 v2.0.1
http://vetusware.com/download/Rebirth%20RB-338%20v2.0.1/?id=13882
ReBirth emulates two Roland TB-303 synthesizers, a Roland TR-808, and a Roland TR-909 drum machine all at once. Each of the emulated devices has its own pattern selector, a feature the original devices are lacking. This allows fast switches between different musical sequences, and re-programming the TB-303 for playing different notes, for instance, is rendered unnecessary. This feature has been adopted in some of Reason's devices. ReBirth also features mixers, a pattern controlled filter (PCF) and some of the standard effects in software synthesizers like delay, compressor and distortion.
