Powerful integrated suite comprising: Database, Programmer, Spreadsheet, Word Processor, Communications, Applications, Utilities. Has a superb relational database, and buried within the spreadsheet is a statistical analysis module that will make you sweat bricks unless you are a statistician. Minimal graphics, hyper DOS-sy, but extremely powerful with a built in programming language and hypertext manual as well as inbuilt help. Also feature macro generator, a dialing contacts manager (primitive) and pop-up text editor. Inbuilt file encryption too. Amazing software for its day and still gives modern suites a run for their money. Loves a DOS environment, works well with windows up to 2000. OK with XP. Best run in a VM these days

Populous 2
