Thrustmapper for Thrustmaster

<http://vetusware.com/download/Thrustmapper%20for%20Thrustmaster/?id=14240>

Thrustmapper is a software application that allows you to program your Thrustmaster game controller. It is also possible to assign personalized commands to buttons, and to reconfigure your controller's axes. For example, you could program your axes in such a way as to enable you to move the mouse pointer with your game controller. You can create different programs (called presets) for all of your games, and have them called up automatically whenever the game is launched!
