3d Studio DOS IPAS and addons collection

<http://vetusware.com/download/3d%20Studio%20DOS%20IPAS%20and%20addons%20collection/?id=14393>

Massive collection of nearly all commercial and noncommercial IPAS plugins and other addons for 3d Studio DOS, including the Yost Group commercial IPAS plugins, the Rayman raytracing renderer, People For People 3ds, NURBS Modeller for 3ds, and many, many more. Most have not been tested in 3ds as I simply don't have the time or experience to do it, but all the archives have been confirmed good. This collection was extremely hard to find (it took over a month of research to find the name of a Southeast Asian software collection from the late 90s that it appeared on, locate a set of floppy images in an obsolete format from an abandoned anonymous FTP site via archive.org, and then decompile them using an ancient DOS program with no documentation that was the only one able to read the image format. Because of the rarity and obscurity of many of these I am uploading them as-is for preservation.
