This is a port from the official copyright that is nothing special. It has been tested in Windows 8.1 however *should* work for XP and any 32bit Windows. Depending on your Windows a 64bit Window may block its running unfortunately. This program is useful for splitting bigger files into DOS manageable 3.5" diskettes. For instance you have a program that is 12MB and you want to save it to your 1.44MB diskettes; In this case you would split it and save the split files onto the 1.44MB diskette(s) [usually a 3.5" floppy]. In order to run it you would carry it all into the machine and combine it. This is a mod of the official files and all rights reserved to the copyright owner. Source codes included. Please see official documentation to the copyrights if you have any questions. Thank you.
