Hi,

I wanted to try out the DOS mode of windows 9x, and so I wanted sound, so I installed the DOS driver. Under DOS, I run "setupds.exe" in order to configure it, but everytime I want to save, it says that it can't find the DMA 1 ... When I set IRQ on ISA or S-IRQ instead of "INTA#", it says the same thing, but with "IRQ 5" ... and I can't save the configuration, and so I don't have sound under pure DOS. I tried with EMM386.EXE launched and without it and it does the exact same thing.

Please help.

I didn't find the right solution from the Internet.
