Panasonic (Matsushita) KXL-D740 PCMCIA 4x CD-ROM Drivers for DOS, Windows 9x, Windows NT and OS/2 Warp. Discman-style quad speed SCSI CD-ROM drive, comes with a Panasonic KXLC002 SCSI-II controller (16bit PC Card card), which actually is a Ratoc REX-9530 and should work with every SCSI device. The 3.5" HD (1440K) floppy disk contains drivers for DOS, Windows 9x, Windows NT and OS/2 3.0+.

Mouse Driver 7.0

Qtronix Mouse Driver 7.0 on a 3.5" DD (720K) floppy disk (image). It supports all mice and trackballs with the following protocols: Microsoft, Mouse Systems and PS/2. It also adds pop-up menu support to office software of that time. It features a "UltraRes" mode, which virtually increases mouse resolution for more accurate drawing in CAD software. Friendly installer.
