TASMx 3.1 (Telemark Assembler) Supports macros! 3.1 (ES)

[http://vetuware.com/download/TASMx%203.1%20\\_Telemark%20Assembler\\_%20Supports%20macros%21%203.1%20ES/?id=15808](http://vetuware.com/download/TASMx%203.1%20_Telemark%20Assembler_%20Supports%20macros%21%203.1%20ES/?id=15808)

A assembler for DOS. Compiles assembler source code to Intel hex format (or MOSTech, Motorola, BIN, IntelWord) to several CPUs (i8048, i8096, Motorola 6800, MOS 6502, 6805, TMS32025, TMS32010, TMS7000, i8080/8085, Z80). Supports macros as #include [asm source], or #define [token], very useful when asm directives are written as defw and you want the compiler to read that as .byte. Example: #define defb .byte. Also, in the folders HEX and SOURCE there is some source code and compiled .hex files of CP/M 2.2 that i tried to compile. Consider that as a gift.
