---

I have a CD on which are files I need access to, saved in 2010. What I did not realise were that these files were written using a version of AppleWorks prior to AW6.

I tried to coax an old Mac into life but with no joy

I found this site and downloaded Clarisworks 5 for PC and loaded it onto a laptop, but to install it I need a serial number.

I cannot find one within the download, can anyone help please?

many thanks
