Epson Equity I+ Dignostic and ROM BIOS Setup Disk 1.01

<https://vetusware.com/download/Epson%20Equity%20I%2B%20Dignostic%20and%20ROM%20BIOS%20Setup%20Disk%201.01/?id=16571>

Files copied (not a disk image) from 360k 5.25" floppy that shipped with the Epson Equity I+ 8088 computer. The disk was labeled "Diagnostics" and includes utilities to setup and test the Epson Equity I+. The "diag.com" provides a menu to all of the operations, including 1-Setup, 2-Format HD, 3-Format FD, 4-System Diagnostics, 5-HD park. The "setup.exe" utility is the ROM BIOS setup, which allows you to set the real time clock (to eliminate boot warnings about it being set wrong), and the serial port BIOS values (baud, parity, etc). The "rombios.com" tool reads the BIOS version string from CMOS and displays it on the screen. The "diagsys.com" tool lets you test various systems on the Equity I+. Tested and working on an Epson Equity I+ (runs fine under DOS 6.22).

MS-DOS 6.2/V & Windows 3.1 setup CDROM (JA)

[https://vetusware.com/download/MS-DOS%206.2V%20\\_%20Windows%203.1%20setup%20CDROM%20JA/?id=16570](https://vetusware.com/download/MS-DOS%206.2V%20_%20Windows%203.1%20setup%20CDROM%20JA/?id=16570)

Those are setup CDROM and FDD images, but those images can't be run some environment, with problems caused by \$DISP.SYS or CDROM.SYS.
