XEphem 3.7.7

<https://vetusware.com/download/XEphem%203.7.7/?id=17336>

A 'venerable' Motif based ephemeris and planetarium program for Unix-like operating systems. Now under MIT Licence. Developed since early 90's. This package is for Debian based distros (xephem\_3.7.7-4\_amd64.deb), with some of the most useful catalogs and a tool to convert Lowell asteroid database. Fully updatable. More info and catalogs: <https://github.com/XEphem>
