Apex NT Ada compiler 1.0.4

<https://vetusware.com/download/Apex%20NT%20Ada%20compiler%201.0.4/?id=17428>

A very early version of the Apex NT Ada 83 and Ada 95 compiler. This 1.x release uses a modified Codewright IDE and has fewer features than the Unix-based Apex compilers. Later versions of Apex NT adapted the Unix IDE and had a more complete feature set. The Apex compiler system traces its ancestry to the Rational R1000.
