3D Studio Max 2.5

<http://vetusware.com/download/3D%20Studio%20Max%202.5/?id=13242>

3D Studio MAX, the world's best selling professional 3D modeling and animation software for PCs has once again outdone itself. Now it is even better. Faster. More Powerful. With a list of over 1000 new features and enhancements to add to its already extensive core capabilities, 3D Studio MAX R2.5 incorporates still more advanced capabilities that meet the escalating needs of 3D modelers & animators, broadcast production professionals, and interactive game developers including enhanced NURBS, Displacement and 3D Motion Tracking. 3D Studio MAX is production proven, delivering the results you need to win in this business. While every other package is re-tooling to become object-oriented, 3D Studio MAX is already in its second-generation Windows NT release. Its object-oriented architecture is perfect for this fast-changing industry because it enables developers and Kinetix to create startling new features and plug-in applications that quickly integrate into the core package. 3D Studio MAX is fully multi-threaded, harnessing the power of multiple processors and free network rendering for incredible scalability. OpenGL and Direct3D support ensure the fastest hardware-assisted graphics to visualize your ideas quickly. Super-fast and beautiful scanline rendering, with the ability to selectively raytrace any part of the scene, helps you create spectacular images while meeting deadlines. MAXScript, a powerful scripting language for customized control and external communication, accelerates your workflow. Fast drag-and-drop control of materials, maps, and models creates a fluid work environment. 3D Studio MAX software leverages the NT platform for you, providing a solid, cost-effective solution for you to grow your business.

Chrome-Imaging Photonyx 1.5 Demo 1.5

<http://vetusware.com/download/Chrome-Imaging%20Photonyx%201.5%20Demo%201.5/?id=13241>

A new Switzerland-based company, CHROME Imaging, recently announced their solution to the wonderful world of post-production Photonyx 1.5 is now shipping. CHROME claims that the software, which is priced at a mere US\$675, was designed to address the high-end post-production market. The program features RealTools, a painting palette which simulates real world tools such as crayons, airbrush and charcoal. But moving on to compositing, Photonyx features "Virtual Screens" technology which offers realtime zoom and pan on images of 100MB and upwards, and allows one to compose multiple layers, channels, masks, paths and text with unlimited undo and redo. The software also allows one to composite via Z-Buffer and Object-ID channels, while alpha channels are automatically loaded. Although Photonyx sounds very impressive (especially for the price) calling it "high-end" may be going a little far (the software is unlikely to give inferno* a run for its money), however, the software, I'm sure, will be a great asset to students, hobbyists, and smaller production studios with lower budgets.

Microsoft Office 97 Professional Thai Edition 97.0.0.0702 (TH)
