Snatch-It 1.11

<http://vetusware.com/download/Snatch-It%201.11/?id=13485>

The COPY II-PC utility program. SNATCH-IT provides you with three very powerful advantages over just using COPY II-PC. First (and most important), any disk that can be copied by COPY II-PC, can be converted into a DOS file, where it can be sent via a modem or copied easily using DOS' copy command. Protected disks no longer have to be "cracked" in order to send them over the phone! The second advantage is that you can free up many of your floppy disks dedicated just to a single program. Now those programs can be stored on your hard disk, where they can be ARChived to save space. The third advantage is when the entire program being copied fits into memory at one time, you can repeatably write target disks or files WITHOUT having to re-read the source everytime. Important note on using Snatchit: *Always* write-protect your source disks before dumping them with Snatchit!
