Hey guys!
I found a Windows 98 CD-ROM in my closet without the product key.
Hmmm. So I found a working product key online and it works! So, who wants an ISO of it?
I will rip it directly off the disk! Thank you guys!

ISOs are also available from a certain website that caused a lot of drama.
Which version is it? There is a chance it could be a version not currently achieved on the net.

Well dammit. The CD is scratched up a lot. Will dig through my cabinets to find an old USB key that may have a ripped ISO on it
