Hello!

I am interested in old OS glitches and things and I wondered about Windows 3.1.

Any idea how to crash it?

thanks!

(P.S. Not CTRL+ALT+DEL, that is not a real crash.

I have an 64MB FAT USB stick which crashes all Windows versions when inserted starting from XP to W10. Not sure about W98 or older.

Could try to make a disk copy and share but not possible on Windows system :lol:

Install Calmaira as your Win3x Shell open it's explorer and then click on Wintutor.exe in the windows directory.

That Crashes my Windows every time for some reason the Windows Tutorial will not load with Calmira as the Shell on Win3x..
