I have been looking all over the place for a 486. I've tried thrift stores (all except one that I should try), Goodwill, eBay, Craigslist, resale shops, pawn shops, and computer shops, and none of them have anything older than a Pentium II. That is where the question comes in - how rare are 486 PCs? Anyone else know?

I saw quite a few here in a popular eBay-like site "ruten" here in Taiwan. For instance:

486DX-33 <https://www.ruten.com.tw/item/show?21830384184754>

486-66 8M RAM : <https://www.ruten.com.tw/item/show?21804627580092>

Even in PC Home USA:

486SX-33 Notebook: <https://www.pchomeus.com/item/show?30212455351450>

Hope you eventually find what you like.
