WinNT 3.1 Japanese (chk) 3.1 (JA)

[http://vetusware.com/download/WinNT%203.1%20Japanese%20\\_chk\\_%203.1%20JA/?id=15285](http://vetusware.com/download/WinNT%203.1%20Japanese%20_chk_%203.1%20JA/?id=15285)

This is a re-upload that uses 7-zip instead of ARJ used by original uploader. According to uploader's description, the files are from "i386" of Windows NT 3.1 Setup CD-ROM (Japan) in April, 1994 Microsoft Development Network CD 4. To install, one must prepare a clean FAT16 partition, copy all i386 files to a dir like C:\ntsetup, boot with DOS boot disk, run C:\ntsetup\winnt.exe. Eventually it will ask for a blank floppy disk, where boot disk will be created, and you will need to reboot with that boot disk to continue Setup. Since this is a pre-release (not final retail) build, it is very picky on hardware that runs it. So far I only succeeded running it with 86Box (Award 486 BIOS).
