486 Cache Disable

<http://vetusware.com/download/486%20Cache%20Disable/?id=12022>

Disabling and Enabling the 80486 Internal Cache// These programs allow you to turn the 80486's internal cache on and off without rebooting. Usually your cache should be left enabled, but some software may not work with caching enabled. In particular, Sierra and Dynamix games will not work correctly with the CMS Sound Blaster if caching is enabled. Also, you can disable the cache to slow down programs that run too fast on a 486. Origin's Wing Commander is a good candidate for this, especially if you have a fast video board. //may also work on Pentium1 and P2

Acrobatic Flight Simulator

<http://vetusware.com/download/Acrobatic%20Flight%20Simulator/?id=12025>

preview version of the simulator game by a russian programmer team. There was never a full release
