This is a slideshow presentation about Mapics II on IBM System/38 machines

WordPerfect 4.2 for DEC Rainbow

<http://vetusware.com/download/WordPerfect%204.2%20for%20DEC%20Rainbow/?id=16088>

WordPerfect 4.2 for DEC Rainbow. Important: This version is ONLY for DEC Rainbow computers. This software will not run on an IBM PC, clone, or emulator. The DEC Rainbow is a non-IBM PC hardware compatible combination Z80/8088 based computer. It uses an unusual single-sided 80-track 96tpi (400k) floppy disk format. Due to the odd format, the IMG files will not open in WinImage. To write to a real disk, use a double (low) density floppy disk in a 1.2mb drive and ensure double-stepping is disabled.
