Nothing gives you an unnerving sense of unease quite like a piece of art by H.R. Giger. He's one of the reasons (if not the reason) why the Alien franchise has scared generations, as well as elevating Species from a schlocky b-movie to a nightmare-inducing guilty pleasure. In 1992 Cyberdreams took his large portfolio of art, gave it a story and used it as the driving force to create their first sci-fi horror adventure game; Dark Seed.
