<http://vetusware.com/download/Encore%202.0.4%20for%20DOS/?id=12078>

Encore is a music editing program. This version is for DOS.

Epic

<http://vetusware.com/download/Epic/?id=12077>

A game like like WingCommander. The best game since Civilization/WCII first! You've never seen such great vector gfx sometimes ago

GDISK 6.5.0.131

<http://vetusware.com/download/GDISK%206.5.0.131/?id=12083>

Partition Tool/ HDD Management

Ghost 2001

<http://vetusware.com/download/Ghost%202001/?id=12084>

Imaging/clone utility

IBM PC 3270 Emulation Program 2.00

<http://vetusware.com/download/IBM%20PC%203270%20Emulation%20Program%202.00/?id=12086>

This is a program use for communication with IBM mainframes. To use this software, you also need a special IBM interface card that speak the hardware protocol used by the IBM mainframes. Oh, and you need an IBM mainframe :)

UnArj 2.30

<http://vetusware.com/download/UnArj%202.30/?id=12081>

Compression file utilities using the ARJ format

Utility_Belt 1.2

http://vetusware.com/download/Utility_Belt%201.2/?id=12082

"Add some pizzazz to your batch files! Utility_Belt is a collection of batch file, security and diagnostic utilities designed to give an advanced, professional look to even the simplest of batch files." (shareware)

VisiCalc Advanced Version for IBM PC

<http://vetusware.com/download/VisiCalc%20Advanced%20Version%20for%20IBM%20PC/?id=12076>

VisiCalc Advanced is historically important as it was both the last version of VisiCalc (Provided by Software Arts), and the late delivery date threw VisiCorp in to a litigious battle with Software Arts, the actual authors of VisiCalc. VisiCorp blamed this delay for harming their reputation and revenue, rather than their failure to market the product, but either way it played a major part in VisiCorp's demise. The "Advanced" capabilities include: Variable Column widths Expanded formatting option Flexible printer control financial functions a smart help facility Microsoft mouse support full word prompts keystroke memory (macros) Earlier "Advanced" versions were released for the Apple II and Apple III. This archive contains one 320K disk image in raw and ImageDisk format. This disk is formatted for DOS 1.x. Some tools like WinImage may not open it. This software is NOT copy protected.

VisiFile 3.0

<http://vetusware.com/download/VisiFile%203.0/?id=12075>

VisiFile is a flat file data base management system. This version is for the IBM PC, there was also an earlier version for the Apple II. VisiFile was written by Creative Computer Applications and published by VisiCorp. Creative Computer Applications followed up with a product called "TurboFile" Features: - Custom entry screens - Indexes - Various selection/retrieval options - Custom reports - Undeletable records. - Up to 32,000 records per file System requirements: - 128K RAM. - Two floppy drives, or one and a hard drive. - IBM PC-DOS 1.1 or later. This archive contains four 160K floppy disk images. These are formatted for DOS 1.x and may not open in WinImage. These disks appear to contain copy protection. It is not known when the software checks. No unprotect is included. This software requires BASIC. This disk is set up to use IBM ROM BASIC. You will need to run this in a machine with genuine IBM ROM basic (IBM Model 5150/5160/5170 or some PS/2s). Replacing BASIC.COM with Microsoft BASIC-86 or GW-BASIC may or may not work.
