Myformat 1.4.2

<https://vetusware.com/download/Myformat%201.4.2/?id=16899>

This is a low-level format program. Operating System Requirement: DOS ,Windows 95/98/ME. You can use it to format a 1.44Mb floppy. You can also format a floppy with TRACK 0 BAD. You can make this TRACK 0 BAD FLOPPY BOOTABLE using 'sys' command after the format is complete. MyFormat is specially meant for floppies with TRACK 0 BAD. You can use it for normal floppies too. As per our knowledge the program is more reliable than other format utilities.
