#### Cleansweep Deluxe 4 4.1

<https://vetusware.com/download/Cleansweep%20Deluxe%204%204.1/?id=17577>

This software can record software-setups to completely deinstall them at a later time. The normal uninstallers, provided with various-setup-programs usually don't remove everything on uninstall.

This problem still exists today. Well, in ancient times there was a tool against this problem:

Cleansweep. This software also runs on WinNT. This software was downloaded from the software-museum on [www.winworldpc.com](http://www.winworldpc.com) and I can't guarantee it's virus-free. A detailed description, screenshots and different versions are available at:

<https://winworldpc.com/product/cleansweep/4x>

#### WinCUPL 5.30.4

<https://vetusware.com/download/WinCUPL%205.30.4/?id=17575>

Rare Software to design PAL- and GAL-chips. This program will run on modern windows-versions if mfc40.dll (from Win95) is copied to the folder \windows\syswow64\ on 64-bit-windows. 32-Bit-Windows wants this file in the folder \windows\system32\ This program runs well on Linux with wine (if mfc40.dll is installed there as well). The serial-number for installation is: 60008009 The software is now freeware and downloaded from the manufacturers homepage:

<https://www.microchip.com/en-us/products/fpgas-and-plds/spld-cplds/pld-design-resources#>
