I don't think Dosbox ever worked for Windows 3.1 or 16bit Windows. I do know that Windows 3.1 can run Dos Programs but when you run Dos from Windows it exits out of Windows to load the Dos Prompt. What I am looking for is a Dosbox like Program for Windows 3.1.

I know there use to be some 16bit programs that would simulate the DOS Command Prompt inside of Windows 3.1 and there where ones that would not exit Windows while loading a Dos Program. They did have their limitations but I don't remember what those programs where called for Windows 3.1.

Does anybody remember such a Program? Or like actually still have a copy?
