Microsoft Word 5.0 5.0

<https://vetusware.com/download/Microsoft%20Word%205.0%205.0/?id=17842>

I've listed it as "Microsoft Word 5.0," as it was listed as such in the most wanted list and thus have uploaded it with the erroneous spelling so that it may be found by the person searching for it. The \*.zip file contains two versions of the program, in 1."Microsoft Word 5.0 (5.25)," & 2."Microsoft Word 5.0 For DOS (Alternate)" folders, containing the respective floppy \*.img files. Tried under DosBox-X, but they appear to be the versions that intermittently require the user to change floppy disks (I didn't find an install executable/instructions on how to properly install: I didn't blindly want to copy all files to a single folder). Perhaps users well versed in the original program will be successful installing the program, especially on genuine vintage hardware.
