What's everyone's DOS Machine(s) and/or Emulator(s) you use?

I have an Amstrad PPC640 x 2 (both working), a HP200LX, and a Tandy 1400 LT on it's way from overseas.

I mainly use the the 200LX but find the screen can get a bit small. PCEmu I haven't been able to get running yet. (Can anyone help?) I use DOSBox sometimes.

In the 90's I used to throw old tech away (I was stupid), but now I know better and hold onto it.

And do you have a dream machine that doesn't exist (yet)?
