Also referred to as "Microsoft Windows 95 Upgrade advisor". It is a little windows 3.1 utility that checks the computer Configuration and tell the user if this computer is compatible with Windows 95. And if it's not fully compatible, it gives the user suggestions on what to do to make the computer compatible.

I'm sorry I'm new to this forum.

Office 4.2 Thai language is broken.

The installer says the file is missing. Nobody checked before the file was uploaded.

I had to fix the problem myself. I have a new upload at [archive.org](https://archive.org)
