RAYXTMFM 2.9

<https://vetusware.com/download/RAYXTMFM%202.9/?id=18210>

RAYXTMFM.EXE is a DOS program that can be used in support of MFM/RLL type hard drive controllers and drives on PC or XT class computers. Presently, RAYXTMFM does the following:

- Looks for a BIOS expansion ROM starting at address C8000. (C8000 is the normal address for the ROM on an XT-class MFM/RLL type hard drive controller.)
- Identifies the motherboard class (PC/XT/AT).
- Attempts to identify the motherboard BIOS.
- Looks for and reports on certain problems.
- Performs some INT 13h functions.
