VtoolsD for Windows 95 2.05b

<https://vetusware.com/download/VtoolsD%20for%20Windows%2095%202.05b/?id=18339>

VToolsD for Windows from Vireo Software is a C/C++ toolkit for writing virtual device drivers (VxDs). It is designed as a replacement for Microsoft's Device Driver Kit (DDK). In addition to a visual-programming environment, the toolkit provides a code generator for dynamically loaded/unloaded device drivers. VToolsD supports VxD development for Windows 3.1 and Windows for Workgroups 3.11 under both Microsoft Visual C++ and Borland C++. In addition, Vireo recently released VToolsD for Windows 95, which supports features of the new OS-like plug and play.
