<http://copy.sh/v86/>

"Most of us remember the glory days of Windows 98. Now you can relive them on a less-shitty computer, thanks to several thousand lines of brilliant Javascript.

Copy.sh is an emulator that runs inside your browser and effectively is the Windows 98 OS, unlike some other webapps that merely look and feel like old-school windows. The project took four years to write, and more importantly, it comes with Minesweeper!"

[sorry for the bump]

This runs Windows 98 now? Wow, that's impressive. If only you could get an emulator like this integrated into your library so you could run the stuff online...
