#### PenCell 1.0

<http://vetusware.com/download/PenCell%201.0/?id=12757>

Dauphin PenCell, a spreadsheet for Windows 3.x with Pen Computing extensions. This is a simple spreadsheet designed for use with a pen. It works with a mouse, but it is intended to be useful for those using a stylus. It says it requires pen computing extensions, which come with the Dauphin. I have not tested it on anything other than the Dauphin DTR-1.

#### Virtual Packet Driver Stub None

<http://vetusware.com/download/Virtual%20Packet%20Driver%20Stub%20None/?id=12756>

This is a packet driver stub for Windows 3.x. You first load your DOS packet driver, then run. It gives access to your packet driver over to Trumpet Winsock, so you can use your network card in Windows through your DOS driver. I use this packet stub along with my AT/Lantic packet driver for the Dauphin DTR-1 and it works perfectly. The only argument you need to pass is the interrupt for your packet driver (e.g. 0x60) Run this program before starting windows.

#### Windows 3.0 With Pen Extensions 1.0 3.0 and 1.0

<http://vetusware.com/download/Windows%203.0%20With%20Pen%20Extensions%201.0%203.0%20and%201.0/?id=12758>

This is the Windows folder taken from my Dauphin DTR-1. This is Windows 3.0 with Pen Computing extensions 1.0. These are not the installer or setup files for Windows, this is just a copy of the Windows directory from a working DTR-1, with all the drivers required for the Dauphin already installed. These files are not intended for general Windows 3.x users, or those looking for a fresh Win 3.x installation, but for those who own a Dauphin DTR-1 and are missing Windows files for that system.
