ACCOUNT EXPRESS HISTORY ------------------------- Copyright (C) 2000, FELITEC Inc.   This file contains a list of changes made to Account Express since its first publication (version 1.0). Version 1.2 - 2000/07/03 ----------------------- Enhancements: In the transaction lists, transactions that have not yet   been cleared now appear in bold in order to make it easier   to distinguish between cleared and non-cleared transactions.   Also in the transaction lists, transactions with a date   passed the current system date now appear in color maroon   instead of black in order to make it easier to distinguish   them from the transactions having a date prior or equal to   the current system date.   Two new buttons ('New' and 'Edit') were added to the   transaction details panel as another mean for adding or   editing transactions.   Bug fixes: When resizing the tree-list view to its minimum size, it   becomes impossible to resize it back to its original or any   other visual size. Version 1.2 fixes this problem.   In very rare and specific circumstances, it is possible to   create two categories with the same name. The system should   never allow this to happen as this could have very unpredic-   table results. Version 1.2 fixes this problem.   Version 1.1 - 2000/03/26 ------------------------ Enhancements: Support for currency format defined in regional settings.   Support for three-letter month when defined by the short-date   format in regional settings. This option changes slightly   the way a date is selected from a date field.   Before saving a file, if the file already exists, the file   is renamed with the extension '.~acx' so the user can return   to the previous version of the file if necessary.   When a grid loses the focus, the color of the currently selected   row in the grid now changes to a different color to make it   easier to distinguish whether the grid has the focus or not. ==
