[View Forum Message](#) <> [Reply to Message](#)

Well now that we have Turtle MOM completed to 100 levels I am taking a break for now. I am returning to study and learn additional materials from Borland Turbo C 2.0 Reference book. Each day I plan to do a page worth of material from the reference book. The programs that I produce may not be complex however I plan to complete my study in programming. In another 3 months I should be complete with my 4-year equivalent in programming. However I will not be getting my formal degree. I plan to compensate by studying programming for the rest of my life until GOD calls me home in peace at 100 years old.

Today I'm just refreshing my knowledge on Borland Turbo Assembler 4.1. This program just exits right away supposedly once it is run. The reason I say "supposedly" is because I do not know if there are intermediate steps involved during the compiling process that inserts codes into my assembly program. Although I hope not that may be the case. I know there are some frontend work done before it can get to running a program. It is like a car. If you look at a car with 4-wheels you see it can run. However the frontend work is the engine that has to be placed in first. Thank you Jesus Christ!

Bless Jesus Christ, GOD, Mary, and The Holy Spirit#

Then bless my real mom Huong Thi Thuyen Vu

Honours to my real mom Huong Thi Thuyen Vu
Honours to my real dad Nguyen Binh Thuy

Congratulations to my two real sisters:
Nguyen Khoa Thuyen
Nguyen Khoa Thi

God, Jesus Christ, is number one!

Thank you GOD although I'm a fool that somehow you gave me talent to be Vietnamese. Also, thank you GOD you gave me talent to be a chess player who is happily involved# Then thanks GOD for giving me my programming although it is just practicing. Did you know a piano player practices for 30000 hours before becoming a concert pianist? Did you know my Uncle who is a doctor has been doing 50000 hours of study and practice? So its going to take me maybe until I'm 100 years of age before..... I think?

I love talking about my real mom Huong Thi Thuyen Vu; she has been there for me all my life and made me who I am today along with my real dad Nguyen Binh Thuy.

I will never forget my two real sisters for the rest of my life; Their names are Nguyen Khoa Thuyen and Nguyen Khoa Thi.

Hopefully I will marry my girlfriend Ho Thi Nga and have a baby girl Nguyen Khoa Tuyet one day in the future.

Anyways this program is one step closer to that hundred of thousands of hours to becoming the best programmer I can be..

It is all in assembly language.

I am just doing a few basic setups to practice my headers so the program could start doing somethings.

I remember when I first really started making programs... I got so many mistakes its not funny!!!

Well I'm just messing around lately. I don't really want to code. I am going by the theory of the turtle. I figure if I really have talent in programming it will come one day. Anyways hopefully I can be happy one day after figuring out Borland Turbo Assembler 4.1?

I think I'd be happy but I might not be happy.

You know you always want to be unique. If you aren't special it doesn't really matter.

I know I care deep down inside what happens in life. I just try not to react and get my hopes up. Also, I'm also scared it is a set up or some kind of trick. So when something good happens it is like maybe it is not real...

I confess. I'm not that good. I'm just a newbie. I hope one day I can come out with a cool program. But to tell the truth it's just my hobby. I like trying stuffs out on a daily basis. I remember hearing stories of the RBI hitter. You try batting many thousands of times before you hit it out of the court. And I love my mom for telling me the story of the tortoise and the hare. I don't want to win. I just want to be enough to be happy. I've seen many DOS programs out there and they all look like much hard work has been put into them. It is out of my reach at this time. However I hope to be in the programming industry for so long that I live. I'm happy where I'm at right now. I know GOD knows best! I love my parents. I love my sisters.....

Re: Thank you Jesus Christ.

An alternate if you want to keep using real hardware is to buy higher processing speed hardware that can handle DOS.

That way the new calibration routine can work better.

For instance the software on a CPU 1000 times faster should perform the same given a normalizing speed.

So the higher the speed of your hardware the better so long that the software has the new calibration routine in place.

[View Forum Message](#) <> [Reply to Message](#)

Jesus! Chua Me O! Jesus Christ!

Well I've posted a quite a small bit on the Windows XP thread.

The game I posted works on XP however DOS should be fast enough that it also works on DOS. The truth is I'm just starting out. I have a 4 year equivalency in programming but my work is just beginning. Notice it is so inefficient that it has to be run on XP to be workable??

So my task now is to keep honing my skills until I can be efficient and make it work. To be the best at programming means you have to be a programmer until you last day of living. I don't know if I have what it takes to program until I am 100 years old. When I say until that time I mean every single day without stopping. Even if I have a code hehe...

GOD 0AD

Content:

I plan on making this game all in assembler (Borland Turbo Assembler 4.1). It is all in TASM 4.1 right now. The only thing is I am redoing everything from scratch almost. All the C code has been

removed.

Thank you to my real mom Huong Thi Thuyen Vu
Thank you to my real dad Nguyen Binh Thuy

Bless GOD then my real mom!

Congratulations to my two real sisters:
Nguyen Khoa Thuyen
Nguyen Khoa Thi

Oh please note the input method is all capital letters. So capital Q to quit, capital J to move the spaceshuttle left, capital L to move the space... I, and K completes the 5 keys.

Bless GOD!

Then bless my real mom Huong Thi Vu

Honours to my real dad Nguyen Binh Thuy

Honours to my real mom Huong Thi Thuyen Vu

Congratulations to my real sisters:

Nguyen Khoa Thuyen

Nguyen Khoa Thi

I consider my youngest sister Thuyen to have the hardest life because the older ones have their parents' first attention. So I give my sister higher status than myself and my middle sister.

Of course I also am happy thanks to GOD that my middle sister graduated while I didn't. This

makes me the lowest of the low status in GOD's sight...

However what I am happy about is that I have the freedom to enjoy programming on my on free will. No one makes me program on a schedule. When a program is produce and put to the public it is because I wanted thanks to GOD!!!!!!!!!!!!!!

This is one of my first creation when I first started programming Borland Turbo C 2.01 and Borland Turbo Assembler 4.1 two years ago. I hope it is fun for someone at this forum at least. I've been kicked off the other forums for talking about my King and Saviour Jesus Christ too much! Oh well another day another program right? hehe My real mom Huong Thi Thuyen Vu always say keep trying until I get it right# My real dad Nguyen Binh Thuy always say to do the right thing and stop goofing up. My real sister Nguyen Khoa Thi says to be nice to your girlfriend!!!!!!!!!!!!!! My real sister Nguyen Khoa Thuyen is the same. Argh that's probably why I don't see her that much hehe Thank you GOD, Jesus Christ, Mary and The Holy Spirit. Please bless my real mom Huong Thi Thuyen Vu with a 100 happy years of life at least but preferably forever#!!

Well I'm working on interrupt vectors right now. In theory it should eventually allow me to do multitasking. However for now it just locks up the computer and waits for a key to be press. Each time it is pressed it flashes the color yellow. What it does is it's tied to the keyboard sensor. So a keypress will trigger the flashing. I could have done it the normal way through a regular program. However it would not be able to do it in the background.

Here I am doing a little multitasking. I've decided to have the stars flying in the background in one direction. The interesting thing is that it is doing this as an independent routine separate from the main program. In no way is it connected to the program. It is actually a separate program. So two programs are being ran at the same time. I've learned a little programming trick. The DOS system has a clock that activates 18.2 times per second. So 18.2 times the stars are flying one direction. However all the other directions are not related to this one direction! In this instance I had the program stop the independent routine when the program ends. However in theory you could have stars flying while you type or do your work.

[View Forum Message](#) <> [Reply to Message](#)

Jesus Christ! Bless GOD, Jesus Christ, Mary, and The Holy Spirit# Then bless my real mom Huong Thi Thuyen Vu. Honours to my real mom and my real dad Nguyen Binh Thuy. Congratulations to my real two sisters Nguyen Khoa Thuyen and Nguyen Khoa Thi. Although I do not have to give Borland the credit for my program, I do feel grateful to GOD that Borland made a good software that I used to make my own programs (eg Borland Turbo Assembler 4.1).

Content: Thank you Jesus Christ.

During my work and study in programming multitasking I realize the DOS interrupts are a little slow compared to direct assembly language. So I do not plan to use it at all if I could manage for my important work. Some interrupts are faster if you are on 32bit Windows XP. However considering all factors DOS is faster using direct assembly.

An example is the timer is called 18.2 times per second. That means it is only done 18.2 times every second at maximum. However pure assembly language can do MIPS (ie Millions of Instructions Per Second). So there is no comparison.

Thank you GOD!!!!!!!!!!!!!!

[View Forum Message](#) <> [Reply to Message](#)

I've been working hard on updating my system with the core of DOS where possible so I can continue to use Borland.

Jesus! If it wasn't for my two hard working parents I'd be living on the streets today. I remember the days when I thought I was a know it all. I went out on my own and said I don't need my two parents. Boy, was I wrong. Shortly going out on my own I ended up sleeping on the sidewalk. There was even a day that I slept on the church parking lot during the rain if I'm not mistaken. That was almost 20 years ago. I can't believe it has been that long. Time has passed me by and

I'm no where near accomplished. Much has happened in the past however I feel like I'm standing still. It's been 2 whole years since I started my programming seriously yet I still feel like I'm a beginning student who's nothing under my belt. I always wish I'm this selftaught talented GURU who gets paid doing what I enjoy. However like all other profession you have to put in your time. The only person who's gonna pay you for learning is your two parents. They want you to succeed because when they are old they are going to need you to be the one who picks up around the house.

Anyways, I've been looking through my backup discs and thankfully found a few backups that I needed. I lost my password so I had to reinstall my OS. Without the backup discs I would have to get another computer. So thanks dad for advising me to always backup.

I got a few OS up and running. Windows Vista, Windows 8, and Snow Leopard. Oh.....almost forgot Windows XP. So four operating systems on my 1 single computer. hehe

I like them all. Each has its own flavour. XP still allows DOS style programs to run. Windows Vista gives it that classic feel since it was built for business. Windows 8 is modern enough for me. Snow Leopard is just robust. So all together I would say they all do the same job. I get to program DOS. Each system has its own feel.

Make sure you do your backups regularly. Just recently I got hit by 3 viruses in a row. You never know where they come from now a days. If you buy a computer try to get one with a DVD drive so you can make a backup to your DVD discs. It is very important that you have a backup of your operating system. Otherwise the virus could wipe out your backup partition and you can't even restore it even if you have that special button that's supposed to restore it back to Windows 10. Viruses can do that you know. Just because it's on another partition doesn't mean it's immune to viruses.

Posted by [tienkhoanguyen](#) on Mon, 01 Aug 2016 20:35:28 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well one of the techniques that I use is so useful to me that I think it deserves credit at least one time in one of my software. I call it the "Allen Pilgrim Tripple Buffer Technique". It was shortly after I heard his interview that I got the inspiration to go and do work trying to find out how to program it. By grace one day GOD showed me in a vision how it works. However I believe that I wouldn't have come into it has it not been for Allen Pilgrim.

Of course Honours:

my real mom Huong Thi Thuyen Vu (she continues to support me)
my real dad Nguyen Binh Thuy (originally got me the first computer)

Congratulations:

my real sister Nguyen Khoa Thuyen (graduated from University)
my real sister Nguyen Khoa Thi (helped me out in California)

Blessings: my real mom.

However highest blessings goes to:

GOD

the saviour of all people

The Holy Spirit

Mary (mother of GOD)

My real big cousin: Carl Vu

Also, thank you to zero A.D.

Amen.

Well this program uses a special technique to transfer graphics. It could be called Quad-Buffering hehe You've heard of double buffering then the new standard triple buffering. Now it's the Quad (4) Bufferings. In essence it combines different screens together into one whole. So you have 4 screens that are being worked on at once; Well almost at the same time it's done.

I'm just having fun right now not really. I'm totally tired because I spent 24 hours backing up my entire computer. It took me like 59 CDs to backup my entire one partition that contains Windows and all my work files. I nodded with my eyes sleeping a couple times. I did take maybe 3 naps between. However it was 24 hours of straight backups. I just wanted to get it done with. You know the external harddrive can be magnetically wiped. So I had to backup to CD so the laser etches the information in permanently.

Content: backup thanks to Jesus Christ!!!

Well you never know if Microsoft will ever stop giving you an activation for your software that has been hard earned. So what I decided was to backup my activated Windows just in case. So imagine you get a virus 1000 years into the future. You are still dirt poor. Well you're in luck because you don't have to keep up with the Jones. hehe You can just take out your rusty old backup set of say Microsoft Windows Vista in 32bit flavour and after a brief restore period you're back in business without re-activating! Well that is in the case that Microsoft will be out of business in the future. However if they still keep activating your softwares like Microsoft Office 2003 for Word Excel etc then they're a pretty profitable company somehow. So far last month I was able to re-activate my 2003 softwares on their server. So Microsoft continues to support their

2003 softwares at least through re-activation.

Subject: Re: misc WORK

Posted by [tienkhoanguyen](#) on Tue, 16 Aug 2016 15:00:27 GMT

[View Forum Message](#) <> [Reply to Message](#)

My grandma would be proud of me today. I was able to calculate the exact path from point A to point B in all assembly language. Initially the problem was that assembly language didn't account for the remainder portion of a formula. You know that fraction part that comes after the dot on the right side of the whole number. Well at least indirectly it could not account for it. However using what was available GOD gave me the gift to take the fraction part into consideration. When you move The Holy Crucifix around it would currently calibrate itself to the topleft portion of the crucifix. Centering it would be a little work however possible. At first I thought it would not be possible however GOD gave me the insight while I was sleeping.

Jesus Christ! Bless GOD, Jesus Christ, Mary, and The Holy Spirit# Then Bless my real mom Huong Thi Thuyen Vu. Honours to my real mom Huong Thi Thuyen Vu. Honours to my real dad Nguyen Binh Thuy. Congratulations to my real two sisters Nguyen Khoa Thuyen and Nguyen Khoa Thi.

Content: Thank you Jesus Christ.

Addendum: There is according to the formula a slight gap with the laws of infinity or something like that. I didn't understand it until I started programming it. I remember using the formula in higher level languages and it also produced the same effect in the middle or on the corner. I

believe at that time it was on the corner. Anyways it works mostly hehe

So just move The Holy Crucifix anywhere you want and press the lowercase-C when you want to calibrate the line from the center.

Thank you.

Subject: Re: misc WORK

Posted by [tienkhoanguyen](#) on Tue, 16 Aug 2016 16:39:36 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well the formula taking infinity into consideration is valid. However to compensate I'm filling in the gaps. Technically you shouldn't see the line however to make it make sense it looks like a line. hehe Anyways when you place the crucifix and press the c key the lines are no longer sporadic. It is one continuous line.

content: Thank you Jesus Christ.

Jesus Christ! Bless Jesus Christ, GOD, Mary, and The Holy Spirit.

Obviously GOD created all of us so we must give all credits to him!!!!!!!!!!!!!!

Bless my real mom Huong Thi Thuyen Vu

She raised me from in her stomach and she is continuing to take care of all the little details#

Honours to my real mom again because she deserves a return on her investment.

Honours to my real dad Nguyen Binh Thuy because he guided me to programming.

P.S. It is all in assembly language.

Posted by [tienkhoanguyen](#) on Wed, 17 Aug 2016 14:23:19 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well this technology has been done before in special effects of photos flipping pages etc. and such. However it is the first time I personally am doing it. It is neat. I like it. Others may find it boring however I take a special interest in programming. I always want to increase my skills at my own rate. You know like a baby who grows only so much each month. No matter how much you force it the baby cannot be stretched to the moon. What you can do is allow GOD's perfect creation to mold himself or herself. So my software is growing each day in a special affect way thanks to GOD through his only son Jesus Christ who died 0 A.D. for all people.

Content: Thank you Jesus Christ.

In this program I've updated it to shine a ray of rainbow-ish colors and reveal a special affect underneath the main page. It is the worst possible program so past present and future, but GOD says listen to your two parents and you will succeed. Jesus Christ! Bless GOD, Jesus Christ, Mary, and The Holy Spirit#!! Mom always tells me to keep practicing and dad says even when you are too old.

Back in the days this software would be running on a 4.77 MHz 8086 Intel chip.

[View Forum Message](#) <> [Reply to Message](#)

I'm going back to the basics with a few formulas. I'm trying to tweak the formula to show in all 4 quadrants. So far it works in 1 quadrant. There are a possible of up to 8 directions. It's hard to explain but this will allow a few special affects in the future. Praise be to GOD in the name of the

highest Jesus Christ! If you run the program you will notice a diagonal line. This is not so special to the average observer. However the thing is it is calculating the upper left half based only upon a given formula for the bottom right half. So it really does not know anything about the upper left section.

My real mom Huong Thi Thuyen Vu continues to be supporting me to this day. I'm an overgrown 42 year old man yet my real mom has to take perfect care of me. I hope one day I can gain enough experience programming to finally be able to take perfect care of my own family like my real mom Huong Thi Thuyen Vu is doing forever thanks to GOD through Jesus Christ, Mary, and The Holy Spirit!

Content: Thank you Jesus Christ.

In this program there is a slight INTRO to how the special affect would be made. If you notice it could now carry the object in this case letter A diagonally. So the formula we worked on earlier all in assembly language now takes place.

That's just the beginning of how a formula may be incorporated to do special works.

Thanks to my real dad Nguyen Binh Thuy I am a programmer today.

Thanks to my real sisters Nguyen Khoa Thuyen and Nguyen Khoa Thi my education continues at home.

Well I hopefully will have Nguyen Khoa Tuyet born to me one day in the distant future; She is my pride and joy of my life.

My wife Ho Thi Nga well I just have to take care of all of my immediate family one day.

Posted by [tienkhoanguyen](#) on Sat, 20 Aug 2016 19:43:55 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well it's a little bit of progress. Not much compared to mathematica from my college days. Mathematica has like tens of thousands of formulas or something rather. However my small

progress here is a working progress. I was able to calculate any angle of travel using a formula I made myself. It is basic algebra and the hard part is that it is all in assembly language. The angle calculations that I made took about 800 lines of assembly coding to make. So the simple movement of the A in the angle I have predefined took about 800 lines alone. The reason is you can set up the angle of the A movement to be any angle.

Thanks to my wonderful and loving two parents: Nguyen Binh Thuy and Huong Thi Thuyen Vu

Also, to my two sisters for showing they can also do something more than me: Nguyen Khoa Thi and Nguyen Khoa Thuyen

Of course the main credits goes to GOD since GOD made all people; I wouldn't be around if it weren't for him!

Hopefully one day I can get married officially to my crush: Ho Thi Nga

Maybe I will have a daughter I plan to name: Nguyen Khoa Tuyet

Anyways the formula is complete for my purposes so far.

The extraction formula only works for 1 direction right now instead of all 8; I just don't feel like another 1000 lines hehe.

"At least not now..."

hehe It's going to take a while to complete the lettering and such. hehe However my routine is complex. It is using a lot of resources. If you don't run it in 32bit XP it's going to be slow. My Vista just got an upgrade to run in fullscreen mode and it is so fast you don't even get to see it fly in! hehe The standard is DOSBox 0.74; That's where regular MS-DOS speed happens. DOSBox 0.74 is set to about 3000 cycles for my usual development. I sometimes speed it up to max cycles however the special affects are messed up and not smooth like I would like. 32bit XP is fine so far on maybe 2GHz hardware.

Content: Thank you Jesus Christ.

Well this is a technique I've learned long ago thanks to GOD 0 A.D.

If you are even a little into MS-DOS and choose to use an emulator like DOSBox 0.74 you are in luck. Create a new directory and place your downloaded DOS softwares into there. Each time you have a new DOS software you want to try out just do the same thing. Then mount the new directory as a harddrive. This way the malware/virus *thinks* it is infecting a real harddrive. When you are done playing with the softwares unmount the harddrive. For example:

In DOS you would type:

```
md mydir
```

Then in your DOSBox 0.74 type:

```
mount c c:\mydir  
c:
```

This changes mydir to a harddrive letter c.

Remember to give GOD 0 A.D. the glory for saving you from all sorts of virus etc.

Posted by [tienkhoanguyen](#) on Sat, 27 Aug 2016 19:24:19 GMT
[View Forum Message](#) <> [Reply to Message](#)

Well this is an *attempted* implementation of the rotation routine in assembly. In C it is easily done using sine and cosine. I am trying to use a simpler method to calculate the degrees. Anyways it is easier said that it is easy than it is to actually code it hehe. Anyways You should notice it tried to rotate the upperleft section at the bottom section. You might be able to barely make out the word "Jesus Christ". A little more tweaking needs to be done however it is most done for now.

Jesus Christ! Bless GOD, Jesus Christ, and The Holy Spirit; Also, bless Mary and my real mom Huong Thi Thuyen Vu. Honours to my real mom and my real dad Nguyen Binh Thuy. Congratulations to my real two sisters Nguyen Khoa Thuyen and Nguyen Khoa Thi. My name is Nguyen Khoa Tien.

Content: Thank you Jesus Christ.

In this one I've tried to tweak a few subtle details that are difficult to find. Previously there was a leak of sorts in the routine. A few have been patched up. Next I will look into the borders to see how I can cover the borders during one of the spin sequence.

"God, Jesus Christ, is number one!" - This is one of the favourite quotes I like to say. I don't say it too often and that's ashame. Anyways today I'm testing a few things out. Nothing big right now.

Jesus Christ! Bless GOD, Jesus Christ, Mary, and The Holy Spirit# Then bless my real mom Huong Thi Vu. Honours to my real mom Huong Thi Vu and my real dad Nguyen Binh Thuy. Congratulations to my real two sisters Nguyen Khoa Thuyen and Nguyen Khoa Thi. Well I Nguyen Khoa Tien am happy thanks to GOD 0 A.D. that I am able to produce a dot on the screen. I remember first starting out and all I could do and it continues to make me happy to this day is put a yellow dot on the screen. hehe Thank you Jesus Christ.

Well through the grace of GOD 0 A.D. I've completed a tentative stars system! With a little tweaking it should be fast and flexible like my parents would have wanted. In the time being it is just the basics. Just press quit in the beginning to bypass the stars screen. Thank you always. Obviously GOD 0 A.D. gets the full entire glories#

My real mom: Huong Thi Thuyen Vu
My real dad: Nguyen Binh Thuy
My real sister: Nguyen Khoa Thuyen
My real sister: Nguyen Khoa Thi
Myself: Nguyen Khoa Tien
My real soulmate: Ho Thi Nga
My real daughter: Nguyen Khoa Tuyet

I've become a little obsessive compulsive about my programming. So now I'm taking a bit of a break. Actually I think MS-DOS 6.22 is so cool that I've come out with a software for it. It's called pix.com and all it does is return power to the user. So take control of MS-DOS 6.22 and be the master for the rest of your life and run it! Come on. What can it hurt? It is only 1 byte in size. A virus can't be that small can it? hehe I take no responsibilities for what goes on in your life after you run the program. I blame it all on Jesus Christ.

Here is a listing from eBay good for another day. Everything looks good for the age. For \$19 you can't beat the deal. Borland Turbo Assembler is worth at least 5 times the price alone by itself brand new. In fact I do 50% of all my work with Borland Turbo Assembler. I have both 2.5 and 4.1. This is a listing for 2.0 it looks like.

<http://www.ebay.com/itm/VINTAGE-LOT-of-Borland-books-s-w-Turbo-Assembler-Profiler-Pascal-C-/252592622551?hash=item3acfb18bd7:g:jfcAAOSwZJBYBt8w>

P.S.

If you want the other 50% for free you can go to <http://edn.embarcadero.com/article/20841> to grab your Borland Turbo C 2.01 if they still have it. You see Borland Turbo Assembler is for speed for processor intensive application development. Borland Turbo C 2.01 is for flexibility and higher level language work that require more complex tasks like mathematical formulas etc. I combine both for maximum affect. However you should really talk to embarcadero for their Borland Turbo C 2.0 professional package. That package includes both Borland Turbo Assembler 2.0 and

Borland Turbo C 2.0 for a single one time fee. All the money you get from selling your software goes to yourself!

I'm just practicing to keep my skills in shape. I've seen a lot of kung fu movies where the kung fu master trains all their lives in the off season. While everyone is playing around the kung fu master is seen in the background keeping in shape and living a long and happy lives. That is why they are call master instead of just student!

Content: If money is the root of all evil and you can stay away from money then you are good right? Jesus Christ help us!

I was reading a gofundme campaign. It starts off altruistic enough like all endeavours good intentions. If not consciously kept in checked you could end up forgetting why you went into it in the first place. If that happens you lose your joy out of life. You lose that something special that kept you alive in the first place. You lose that spark in your life that just makes you want to actually go to your job.

For instance, I've been on www.vetusware.org for going on a year now. When I first got here it was a backup place just in case I get banned for my beliefs as a non-denominational Christian brought up in a Catholic/Buddhist family while doing my job as a programmer on a limited budget waiting for my skills to blossom to the point where I could be attractive to my future dove. Now it has become my sole place to frequent when I want to get limited venting while keeping my skills up to date to remember my "good man" real dad. It has also become a place where my real mom gets a whole lot of praises at least virtual praises along with my two real sisters.

The point I am trying to make is that keep your eyes on Jesus Christ and he will keep your goals where you can hit it!!!!!!!!!!!!!! Remember the apostle who started to sink when that apostle looked

away from God's son? Well Gawd let's get to the point already as kaynight would say. hehe
