Eagle 1630-40 Software Master Rev A

<http://vetware.com/download/Eagle%201630-40%20Software%20Master%20Rev%20A/?id=13164>

This disk contains the default set of application files loaded on to an Eagle 1600 hard disk drive. It contains EagleCalc, EagleWriter, and DOS 1.25 application files (But not the system files). This is a 96TPI Quad Density disk image in Eagle DOS format (80 tracks, 2 heads, 5 sectors per track, 1024 byte sectors) Note: The extracted file "Z.hep" should actually be named "\.HEP", however that is not a valid filename under DOS 2.x or later. This disk is supposed to be accompanied by a disk labeled "Test and Initialization Diskette", If anyone comes across that disk, please post it!

Microsoft MS-DOS 5.00 (1991-07-23) Packard Bell OEM

[http://vetware.com/download/Microsoft%20MS-DOS%205.00%20\\_1991-07-23\\_%20Packard%20Bell%20OEM/?id=13160](http://vetware.com/download/Microsoft%20MS-DOS%205.00%20_1991-07-23_%20Packard%20Bell%20OEM/?id=13160)

MS-DOS 5.00 for Packard Bell computers. This is a slightly later OEM revision.

Microsoft MS-DOS 5.00 (1991-05-30) Packard Bell OEM

[http://vetware.com/download/Microsoft%20MS-DOS%205.00%20\\_1991-05-30\\_%20Packard%20Bell%20OEM/?id=13161](http://vetware.com/download/Microsoft%20MS-DOS%205.00%20_1991-05-30_%20Packard%20Bell%20OEM/?id=13161)

MS-DOS for Packard Bell computers. This is a slightly earlier OEM version.

Microsoft Windows 3.0 (3.00.55 Beta)

[http://vetware.com/download/Microsoft%20Windows%203.0%20\\_3.00.55%20Beta\\_/?id=13162](http://vetware.com/download/Microsoft%20Windows%203.0%20_3.00.55%20Beta_/?id=13162)

This is a BETA pre-release of Windows 3.0. These disk images are missing some files. You must place a copy of himem.sys on disk 3 in order to install. Disk 4 is missing drivers. It will not run in 386 enhanced mode. Start Windows with "WIN /S" To use a PS/2 mouse, open the "Windows Setup" icon from Program Manager and select the PS/2 mouse.
